QUESTION 1

Which two file stages allow you to configure rejecting data to a reject link? (Choose two.)

A. Data Set Stage

B. Compare Stage

C. Big Data File Stage

D. Lookup File Set Stage

E. Complex Flat File Stage

Correct Answer: CE

QUESTION 2

You are editing the configuration file. Which statement is true about file system efficiency?

A. Using multiple scratch spaces in a logical node improves performance.

B. For the resource disk, it is best to use the partition where the engine is installed.

C. Creating scratch disk spaces on an internal disk rather than on an NFS drive improves sort performance.

D. In a clustered environment where NAS is used for a common storage, you must specify the internal disk for scratch disk.

Correct Answer: C

QUESTION 3

Identify two restructure stages that allow you to create or organize vectors in the output link results? (Choose two.)

A. Split Vector

B. Column Import

C. Split Subrecord

D. Merge records

E. Make Subrecord

Correct Answer: CE

QUESTION 4

Which derivations are executed last in the Transformer stage?

A. Input column derivations

B. Loop variable derivations

C. Output column derivations

D. Stage variable derivations

Correct Answer: C

QUESTION 5

Which two statements are true about stage variables in a Transformer Stage? (Choose two.)

A. Stage variables can be set to NULL.

B. Stage variables cannot be set to NULL.

C. Varchar stage variables can be initialized with spaces.

D. Stage variables are refreshed with default values before each new input row is processed.

E. A stage variable in one Transformer can refer to a stage variable in another Transformer, as long as the second Transformer was processed earlier in the job flow.

Correct Answer: AC
