QUESTION 1

A company has prioritized their most important requirements for SOA to be the need to speed up integration, reduce application redundancy and provide the flexibility to change service implementations. Which type of project should be recommended?

- A. Create a common metadata model that can be used for all development projects.
- B. Implement an Enterprise Service Bus (ESB) and registry/repository as a connectivity layer in the SOA architecture.
- C. Document the existing architecture, legacy systems, and interfaces. Make this available in a common repository that can be accessed by all developers.
- D. Use business modeling tools to model and simulate the application development process and identify bottlenecks. Address highest priority bottlenecks that can be automated to E.

Correct Answer: B

QUESTION 2

How can disparate services communicate with each other in an SOA?

- A. Use XML messages to provide interoperability.
- B. Service providers adopt one common data model for all services.
- C. Enforce a common data model at the Enterprise Service Bus (ESB) layer.
- D. Business analysts create the integration logic details to negotiate between services.

Correct Answer: A

QUESTION 3

What does the information in the service registry support?

- A. The complete service lifecycle
- B. Runtime lookup of service endpoints
- C. Enhances messages through mediation
- D. Transformation of messages between different technologies

Correct Answer: B

QUESTION 4

Which service is running in an SOA environment that is not defined in a service registry and is built without proper governance or controls?

- A. Rogue Service
- B. Duplicate Service
- C. Shelfware Service
- D. Composite Application Service

Correct Answer: A

QUESTION 5

Which action should they take first?

- A. Create a service registry.
- B. Define an SOA governance model.
- C. Perform an SOA maturity assessment.
- D. Create an SOA Center of Excellence (CoE).

Correct Answer: C
