-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which two statements describe characteristics of SOA?

- A. Multiple business units host the same service to ensure maximum reuse and availability.
- B. Maximum reuse is achieved by ensuring services are generic so that the same service serves many different business tasks.
- C. Existing APIs are exposed over new technologies such as Web services and Enterprise Service Buses (ESB) to increase business flexibility and agility.
- D. Programming by contract ensures the service consumer can be unaware of the implementation details of the service provider facilitating loose coupling.
- E. Through layered abstraction over the implementation and runtime details, it is possible to provide software resources that give the right balance between reuse and specificity.

Correct Answer: DE

QUESTION 2

A company has prioritized their most important requirements for SOA to be the need to speed up integration, reduce application redundancy and provide the flexibility to change service implementations. Which type of project should be recommended?

- A. Create a common metadata model that can be used for all development projects.
- B. Implement an Enterprise Service Bus (ESB) and registry/repository as a connectivity layer in the SOA architecture.
- C. Document the existing architecture, legacy systems, and interfaces. Make this available in a common repository that can be accessed by all developers.
- D. Use business modeling tools to model and simulate the application development process and identify bottlenecks. Address highest priority bottlenecks that can be automated to E.

Correct Answer: B

QUESTION 3

Which people, organizational or technology factors negatively impact the adoption of SOA?

- A. Putting funding mechanisms in place to encourage reuse
- B. Agreeing on policies for service reuse across lines of business
- C. Planning to perform a complete overhaul of all business processes
- D. Defining additional capabilities required, such as upgrades to the IT infrastructure

Correct Answer: C

QUESTION 4

What describes the role of the Enterprise Service Bus (ESB)?

- A. An adapter that exposes back end functionality of legacy systems
- B. A routing and mediation component that loosely couples service interfaces
- C. A routing and mediation component that loosely couples service implementations
- D. A component where transformation and aggregation are used to implement service interfaces

Correct Answer: C

QUESTION 5

In applying SOA, which principle can reduce overall cost?

- A. Reuse services across lines of business.
- B. Build services for only the most important business functions.
- C. Build general services that can perform a variety of business tasks.
- D. Reimplement all services on a consistent hardware and software platform.

Correct Answer: A
