QUESTION 1

At the end of Sprint 1, which of the following would give the best indication of test coverage?

- A. Number of user-stories required to define the trading environment.
- B. Amount of unit testing planned by developers for each user-story associated with the trading environment.
- C. Number of links required to the stock exchange.
- D. Percentage of user-stories tested and passed for the trading environment.

Correct Answer: D

QUESTION 2

Which of the following best describes a testing challenge of the application domain of the routers described?

- A. Testing that the receivers PC can store emails routed to it.
- B. Testing that large organisations can scan incoming files routed to them for viruses.
- C. Testing that packets are delivered by the routers in the required timescales.
- D. Testing that files can be sent in any language.

Correct Answer: C

QUESTION 3

Which of the following would be applicable as part of a test policy for testing these types of systems?

- a.
Systems must be tested for compliance to industry standard routing protocols.
 - b.
Testing for the latest upgrade will require testing of increased network traffic of 100%.
 - c.
Testing for the fix will require the use of dynamic analysis tools.
 - d.
Releases will not be made if systems have any high priority defects outstanding.
- A.
a and b.

- B.
- a and d.
- C.
- b and c.
- D.
- b and d.

Correct Answer: B

QUESTION 4

Which of the following review types would be recommended at the start of each Sprint, for the reason given?

- A. An inspection, to find errors in the user-stories.
- B. A management review, to check that the user-stories will accurately reflect the rules for accessibility.
- C. A walkthrough of the set of user-stories, to ensure that the developers and testers understand what is to be built.
- D. A technical review of the test plan, to ensure that the developers are aware that they must produce good quality code.

Correct Answer: C

QUESTION 5

Which of the following is the main purpose of an incident tracking process?

- A. To identify the average number of steps required to recreate each incident.
- B. To calculate the average turnaround times per defect.
- C. To identify the priority of each incident.
- D. To understand the status of each incident at any given time.

Correct Answer: D

Case Study # 3

Scenario

Data is transmitted over the internet as a series of packets. Each packet is sent to its destination via the best available route. The decision on the best available route is made by a series of routers on the internet.

In order to make the best decision on the route to take, the router:

1) Scans the destination address and matches it against rules set up in a configuration table. 2) Checks the performance of the primary connection to see if it is good enough to send the packet. If not,

it seeks an alternative.

Routers handle many millions of packets being sent at the same time. Packets can take the form of email messages, data files etc.
