#### QUESTION 1

Which of the following best describes a testing challenge of the application domain of the routers described?

- A. Testing that the receivers PC can store emails routed to it.
- B. Testing that large organisations can scan incoming files routed to them for viruses.
- C. Testing that packets are delivered by the routers in the required timescales.
- D. Testing that files can be sent in any language.

Correct Answer: C

---

#### QUESTION 2

Which stage of the Fundamental Test Process will be most affected by the use of user-stories as defined above?

- A. Creating a schedule of activities as part of test planning.
- B. Creating test cases as part of test design.
- C. Creating the test environment as part of test execution.
- D. Assessing requirements coverage at the end of each Sprint.

Correct Answer: B

---

#### QUESTION 3

Which of the following activities should be carried out at the start of this process?

- A. Marketing of the service to as many people as possible to reduce the risk of poor revenues.
- B. Holding a workshop with as many stakeholders as possible to gain their views on the risks to the product and project.
- C. Meeting with the project manager to agree a bigger budget.
- D. Meeting with the development manager to agree defect fix turn-around times.

Correct Answer: B

---

#### QUESTION 4

Which of the following methods of test estimation would be most appropriate for each Sprint?

- A. Ask the testers to talk to each other and reach a consensus.

- B. Take 30% of the total development time required for the Sprint.
- C. Conduct a test point analysis on the content and navigation requirements.
- D. Use metrics from the last accessibility project at MSC.

Correct Answer: A

---

#### QUESTION 5

When a software defect in a system has been found and fixed, which of the following activities should be undertaken next?

- a.  
Debugging.
  - b.  
Confirmation testing.
  - c.  
Regression testing.
  - d.  
System testing.
  - e.  
Static testing.
- A.  
a and b.
- B.  
b and c.
- C.  
c and d.
- D.  
c and e.

Correct Answer: B Case Study# 4Scenario

A bank is upgrading its systems to include an on-line investment service, allowing investors to trade with each other, in a mini-stock market environment.

The upgrade will be carried out using Agile development (within the Scrum framework). Here, the iterations are referred to as Sprints. For each Sprint the required functionality will be defined as a set of user-stories.

The user stories are typically 1-2 lines long, indicating what the business wants the system to do. These user stories will be built then tested.

There will be 3 Sprints:

- 1) Creation of the mini-stock market trading environment.
- 2) Creation of additional front-end enhancements.
- 3) Linking to stock exchange for pricing.

You are the test manager. You lead a team of 4 testers, and there are 6 developers. Your team has worked on Agile projects previously, and on average, Sprints usually last 4 weeks. At the end of all Sprints, a full end to end test is carried out. This is called the E2E test phase. You are worried that 4 weeks will not be sufficient time for the first Sprint. You have decided to conduct a Risk Management exercise before the project starts.
