QUESTION 1

Which of the following test design techniques would be most suitable for testing that the oxygen is released at the required times?

- A. Decision Testing.
- B. Statement Testing.
- C. Data flow Testing.
- D. Boundary Value Analysis.

Correct Answer: D

QUESTION 2

Which of the following provides the best example of a product risk leading to a project risk?

- A. The signalling systems may have more defects than anticipated, leading to the need for more retesting to be carried out.
- B. There may be unexpected lags on the network traffic communication, causing drivers to slow the trains down unnecessarily.
- C. The new development staff may require training for this type of system, which, if not carried out, may lead to an increase in the number of defects introduced.
- D. The budget may need to be increased significantly during the project, otherwise there may be delays in the delivery of the system.

Correct Answer: A

QUESTION 3

At the end of Sprint 1, which of the following would give the best indication of test coverage?

- A. Number of user-stories required to define the trading environment.
- B. Amount of unit testing planned by developers for each user-story associated with the trading environment.
- C. Number of links required to the stock exchange.
- D. Percentage of user-stories tested and passed for the trading environment.

Correct Answer: D

QUESTION 4

When a software defect in a system has been found and fixed, which of the following activities should be undertaken next?

- a.
Debugging.
 - b.
Confirmation testing.
 - c.
Regression testing.
 - d.
System testing.
 - e.
Static testing.
- A.
- a and b.
 - B.
 - b and c.
 - C.
 - c and d.
 - D.
 - c and e.

Correct Answer: B Case Study# 4Scenario

A bank is upgrading its systems to include an on-line investment service, allowing investors to trade with each other, in a mini-stock market environment.

The upgrade will be carried out using Agile development (within the Scrum framework). Here, the iterations are referred to as Sprints. For each Sprint the required functionality will be defined as a set of user-stories.

The user stories are typically 1-2 lines long, indicating what the business wants the system to do. These user stories will be built then tested.

There will be 3 Sprints:

- 1) Creation of the mini-stock market trading environment.

2) Creation of additional front-end enhancements.

3) Linking to stock exchange for pricing.

You are the test manager. You lead a team of 4 testers, and there are 6 developers. Your team has worked on Agile projects previously, and on average, Sprints usually last 4 weeks. At the end of all Sprints, a full end to end test is carried out. This is called the E2E test phase. You are worried that 4 weeks will not be sufficient time for the first Sprint. You have decided to conduct a Risk Management exercise before the project starts.

QUESTION 5

Which of the following activities should be carried out at the start of this process?

- A. Marketing of the service to as many people as possible to reduce the risk of poor revenues.
- B. Holding a workshop with as many stakeholders as possible to gain their views on the risks to the product and project.
- C. Meeting with the project manager to agree a bigger budget.
- D. Meeting with the development manager to agree defect fix turn-around times.

Correct Answer: B
