**QUESTION 1**

An architecture for the deployment of IBM Maximo Asset Management is being created for a customer. The user acceptance testing (UAT) and production environments include: 2 user interface (UI) Java Virtual Machines (JVMs), 1 Maximo Integration Framework (MIF) JVM, and 1 cron JVM each. Why are there separate JVMs for the UAT environment?

- A. A UAT environment always provides an infrastructure supporting the same number of users as a production environment.
- B. A UAT environment with JVM segregation requires separated JVM functions in any environment other than development.
- C. The minimum number of JVMs that must be utilized in any customer UAT environment is: 2 UI JVMs, 1 MIF JVM, and 1 cron JVM.
- D. A UAT environment allows for the testing of configuration and concepts utilized in the production environment design in a similar way to how they are actually utilized in production.

Correct Answer: D

---

**QUESTION 2**

The Windows firewall must be disabled so the IBM Maximo Asset management V7.5 installation can take which action?
