QUESTION 1

What if the projected forecast date for a preventive maintenance (PM) record occurs in an inactive season?

- A. The active season dates should be modified.
- B. The inactive season dates should be modified.
- C. The PM record is forecasted on the latest date in the next active season.
- D. The PM record is forecasted on the earliest date in the next active season.

Correct Answer: D

QUESTION 2

On an existing classification, one of the attributes has a value in the Inherited From field. What does this mean?

- A. The attribute is associated with a classification that is higher up in the hierarchy.
- B. The attribute is associated with a classification that is lower down in the hierarchy.
- C. Any new attributes on this classification will inherit the same configuration as this attribute.
- D. The attribute will automatically inherit values from a template when the classification is assigned to a record.

Correct Answer: A

QUESTION 3

What is required to generate a forecast for an existing preventive maintenance record?

- A. Estimated next due date
- B. Last work order start date
- C. Last work order generation date
- D. Last work order completion date

Correct Answer: C

QUESTION 4

What are three valid Job Plan task components?

- A. Tools
- B. Labor

- C. Routes
- D. Materials
- E. Contracts
- F. Schedules

Correct Answer: BDF

QUESTION 5

A maintenance planner wants to manually generate a preventive maintenance (PM) work order within 60 days of its due date to ensure tools and materials can be gathered on time. How can this be accomplished?

- A. Enter the value within the Generate Work Orders dialog window.
- B. This is not possible because PM work orders cannot be generated until they are due.
- C. By changing the Frequency Units to days and then setting the frequency to the number of days required.
- D. By specifying the tools and materials required it will automatically detect that this PM's work order requires early generation.

Correct Answer: B
