QUESTION 1

Which of the following is true of a derivation that has been created in the transformation model?

- A. The derivation cannot be disabled once it has been added to the transformation model.
- B. The derivation can be added to a dimension build delivery.
- C. The derivation can be used to perform calculations in the SQL statement of a data source.
- D. The derivation can be added to a fact build delivery.

Correct Answer: D

QUESTION 2

What is a difference between a measure element and an attribute element?

- A. Attribute values can be aggregated by Data Manager, while measure values cannot.
- B. Measure values can be merged by Data Manager, while attribute values cannot.
- C. Attribute values can be merged by Data Manager, while measure values cannot.
- D. Measure values can be aggregated by Data Manager, while attribute values cannot.

Correct Answer: D

QUESTION 3

Incoming fact data includes an audit reference column for each row. This column has been identified as an attribute in the transformation model. When executed, the fact build should designate this element as a key in the resulting fact table. This fact table will be created (not updated) by the fact build. What should the developer do?

- A. Convert the attribute element into a derived dimension element.
- B. Specify the column as a key in the table delivery properties.
- C. Specify the column as a key in the data source properties.
- D. Convert the attribute element into a derivation element.

Correct Answer: B

QUESTION 4

Where can a variable be declared?

- A. In a build specification.

- B. In a hierarchy.
- C. In a data source connection.
- D. In a Data Manager folder.

Correct Answer: A

QUESTION 5

Which of the following is true of pivoting?

- A. Each data source column in the array must be mapped to a corresponding pivot value.
- B. It increases the number of output columns.
- C. It decreases the number of output rows.
- D. Each data source column in the array must be mapped to a pivot derivation element.

Correct Answer: A
