QUESTION 1

In Framework Manager, it is recommended to model operational metadata as a virtual star schema for which one of the following reasons?

- A. Provides stability to the underlying data structure.
- B. Creates an easy-to-read data dictionary for end users.
- C. Ensures inner joins between data source query subjects.
- D. Helps to remove ambiguity and provide predictable results.

Correct Answer: D

QUESTION 2

When importing metadata into Framework Manager from a relational database, which of the following can be controlled by the modeler performing the import?

- A. Specifying the item names in various languages.
- B. Specifying the usage property for generated query items.
- C. Converting inner joins in the database to outer joins in the model.
- D. Generating relationships based on existing primary and foreign key relationships in the database.

Correct Answer: D

QUESTION 3

Which of the following is true for 0..n cardinality?

- A. The cardinality is optional and a union will be performed.
- B. The cardinality is optional and an inner join will be performed.
- C. The cardinality is optional and an outer join will be performed.
- D. The cardinality is required and an outer join will be performed.

Correct Answer: C

QUESTION 4

Which of the following is incorrect regarding the Cognos 10 security environment?

- A. Cognos 10 must be configured to use only one authentication provider at a time.

- B. To perform authentication of users, a connection to the Cognos namespace must be defined.
- C. In Framework Manager, object security is implemented by defining access to objects for users, groups and roles defined in the authentication providers.
- D. In Framework Manager, object security is implemented by defining access to objects for groups and roles (of which users are members), not individual users.

Correct Answer: C

QUESTION 5

Although modelers can use model query subjects to create entire business views, it is recommended to use them to do which of the following?

- A. Resolve conflicting keys and indexes and generate minimized SQL.
- B. Combine facts and dimensions for intuitive ad hoc business views.
- C. Resolve reporting traps and simplify snowflake tables through consolidation.
- D. Provide dimensional information through the use of determinants.

Correct Answer: C
