QUESTION 1

When the LDAP service runs on a server, it spawns a schema daemon that runs at regular intervals. What is the schema daemon used for?

- A. The schema daemon is a task that must be loaded on all Domino servers configured with an Extended Directory Catalog.
- B. The schema daemon monitors the Directory Assistance database and redirects name searches to the most appropriate server.
- C. The schema daemon updates the IBM Domino Directory each time a new entry is added so it can be served up by the LDAP task.
- D. The schema daemon ensures that each LDAP service running in the domain uses a schema that is up-to-date and consistent across servers.

Correct Answer: D

QUESTION 2

The notes.ini file was accidentally deleted on a user's workstation. Chris is manually recreating the notes.ini file on the local workstation. Which of the following are the required first three lines of the notes.ini?

- A. [Notes] Domain= Names=
- B. [Notes] SetupDb= Log=
- C. [Notes] Directory= KitType=1
- D. [Notes] Ports= KeyFileName=

Correct Answer: C

QUESTION 3

What is the Console_LogLevel setting in the notes.ini used for?

- A. It allows a user to switch between database replicas.
- B. It is used to consolidate the browsing and messaging logs.
- C. It is used to track console commands for auditing purposes.
- D. It controls the level of detail that the messages on the status bar captures.

Correct Answer: D

QUESTION 4

Which task must be running on the IBM Domino server to view mail routing topology layouts from within the Domino Administrator client?

- A. Maps
- B. Sched
- C. MMTC
- D. Topology

Correct Answer: A

QUESTION 5

Kat is setting up an LDAP client to connect to the IBM Domino LDAP service. Which statement is true about the LDAP service that Kat wants to connect to?

- A. Kat would have to set up Directory Assistance before an LDAP service can be started.
- B. Kat would have to set up a Directory Catalog before an LDAP service can be configured.
- C. The LDAP task is not necessary for Kat to connect to the LDAP service. She should be able to connect to the Domino Directory using an LDAP client.
- D. The LDAP task runs automatically on the administration server for the primary Domino Directory. On other servers in the domain, Kat would have to run the LDAP task manually.

Correct Answer: D
