QUESTION 1

Steven has taken over as the designer for an existing application and has received reports of incorrect data in a particular field in documents. He wants to find all the places in the database that access that field. How would he accomplish this search?

A. Steven should create a full text index and search the index for the field name.

B. Steven should use the Eclipse search perspective and search for the field name while the database is opened in this perspective.

C. Steven should use the Eclipse search functionality and search for the field name on the File Search tab and choose selected resource as the scope.

D. There is no way to accomplish this automatically. Steven will need to open each design element and search for the field name in each design element.

Correct Answer: C

QUESTION 2
