QUESTION 1

Oleg would like to add a banner at the top of his XPage to display a graphic and the name of the application. How can he do this task?

- A. Drag a Header control from the core controls to the top of the XPage canvas. Select the image from the Image option, and select ApplicationTitle for the Text option.
- B. Open the Properties view for the XPage. Open the All Properties tab and expand the basics section. Select the image for the headerImageproperty. For the headerLabel property, select Application Title
- C. Open the Properties view for the XPage. Open the All Properties tab and expand the basics section. Select the image for the pageIconproperty. For the pageTitle property, specify that it is a Computed value and enter @DbTitle();
- D. Drag a Panel control from the controls palette to the top of the XPage canvas. Drag an Image control onto the panel and select the image to include. Drag a Label control onto the panel. From the Properties view for the Label, open All Properties, select data > value. Set the Value to Compute value, and enter @DbTitle();

Correct Answer: D

QUESTION 2

John is using the new Java editor to create a Java agent that will fill up some items in a Lotus Notes document. During the editing process, John realizes that a specific variable name is not the name of the item he wishes to update, but he used that variable many times in the code already.

How will John change the name of the variable in the code?

- A. Click the menu item Edit -> Find/Replace in the dialog box, enter the new variable name, and click replace all.
- B. Click on the menu item Edit -> Rename in the dialog box, enter the new variable name, and click replace all.
- C. Double-click the variable name to select it, right-click, select Rename from the menu, enter the new variable name, and press Enter.
- D. Double-click the variable name to select it, right-click, select Refactor from the menu, then select Rename, enter the new variable name, and press Enter.

Correct Answer: D

QUESTION 3

Hurley is working on a shipping application which is part of the cargo working set. He switches over to the employee working set and notices that the shipping application displays as part of that set. How can Hurley remove the shipping application from the employee working set?

- A. Select the shipping application and from the menu bar select File > Application > Delete.

- B. Click on the folders icon on the application navigator menu, highlight the employee working set and select Edit Working Set. De-select the shipping application.
- C. Select the shipping application from the Application Navigator. From the menu bar, click Project > Remove from Working Set.
- D. Click on the folders icon on the application navigator menu, highlight the employee working set and select Edit Working Set. Highlight the shipping application and click Remove from working set.

Correct Answer: B

QUESTION 4

Sawyer wants to display the contents of the family members field, which contains multiple values, as a list on his contacts XPage. Which control would allow Sawyer to display multiple values in a field as a list?

- A. Use the repeat control
- B. Use the table control
- C. Use the panel control
- D. Use the database control

Correct Answer: A

QUESTION 5

Nick would like to use JavaScript to get the name of the current XPage.

Which one of the following global objects and its corresponding method can he use to accomplish this?

- A. `view.getPageName();`
- B. `session.getPageName();`
- C. `database.getPageName();`
- D. `applicationScope.getPageName();`

Correct Answer: A
