### QUESTION 1

How does custom Java code and standard Java API libraries differ from Signed Agents when executing in a Notes client?

- A. There is no difference. The signer of the XPage application will be checked against the ECL of the local workstation.
- B. The permissions of the XPage application signer are checked against the Java Security Manager FCL to determine if the signer has permission to perform the operation.
- C. When the code is executed the Java Security Manager passes a permission check to the Notes Client ECL to see if the XPage application signer has permission to perform the operation.
- D. Custom Java code and standard Java API libraries are not bound by the local ECL like Signed Agents are. The runtime permissions are based on the XPage ECL which is contained in the XPage application.

Correct Answer: C

---

### QUESTION 2

Kathy, the Domino administrator, issued a Show Server command on her Domino server. The following showed for the current status of Domino Attachment and Object Service:

Read Only Which of the following describes the explanation for this status?

- A. File attachments exist in the DAOS repository, and they are read when documents containing them are retrieved
- B. No file attachments exist in the DAOS repository, and all attachments are stored in their full size in documents
- C. If any file attachments are created in participating databases, they are placed in the DAOS repository and available
- D. All file attachments in the DAOS directory are specified as read only and may not be edited or removed from DAOS until it is unlocked

Correct Answer: A

---

### QUESTION 3

Domino Attachment and Object service has been running on your Domino server. As the Domino administrator, you then select NSF for the field "Store file attachments in DAOS." Which of the following happens to attachments accessed and created after this change is successfully applied?

- A. Users can continue to modify and place attachments in DAOS until the administrator purges all from the storage and replaces the database
- B. links
- C. All attachments are moved back into the respective databases where the attachment headers are located, and new attachments are not placed

D. in DAOS

E. Any files already stored in the DAOS repository remain there, and documents containing those existing file attachments are read from the

F. DAOS repository but can no longer be modified there

G. DAOS immediately removes all orphaned attachments from the repository and removes the remainder as the attachments are accessed. New

H. attachments are placed in DAOS until all are accessed

Correct Answer: C

---
