### QUESTION 1

Ian has written a LotusScript agent to record some statistics when a browser user submits a document.

What LotusScript NotesSession property allows Ian to get a copy of the submitted Lotus Domino document before it is saved?

- A. CurrentDocument
- B. Document
- C. DocumentContext
- D. DominoDocument

Correct Answer: C

---

### QUESTION 2

Ken would like to allow remote salespeople to replicate information from the videoinfo.nsf application to their laptops, so that the replications are fast and the application on each laptop isn't too big. Each salesperson should only replicate the information from their territory.

Which one of the following does Ken need to do to configure this?

- A. Use AuthorName fields to limit access to information.
- B. Use a selective replication formula.
- C. Give the salespeople reader access to the application.
- D. Give the SalesPeople group the [TerritoryOnly] role

Correct Answer: B

---

### QUESTION 3

What function does the Formula type field perform?

- A. It allows documents of interest to be served via subscriptions in the Headlines database.
- B. It allows multiple values in a field to be validated against a defined @Formula statement.
- C. It allows documents to precompute specific values based on user input.
- D. It allows @Formula statements to be entered in a document without executing.

Correct Answer: A

---

#### QUESTION 4

Clifford has a Readers field in his Expense Report form. Who will be able to see the document once he saves it in the application?

- A. Only those people listed in the Readers field.
- B. Anyone listed as a Reader or above in the Access Control List who is also listed in the Readers field.
- C. Anyone listed as a Reader or above in the Access Control List.
- D. Only those people listed in the Execution List or the Access Control List.

Correct Answer: B

---

#### QUESTION 5

Jason coded and saved a scheduled Java server agent that should execute on ServerX. The agent does not run at all, even though Jason signed it with his Notes id.

Given that the agent manager is running on the server, which one of the following should Jason check first to diagnose the problem?

- A. Check whether Jason is in the "Database administrators" list on the server document.
- B. Check the Agent security tab to make sure that "Run as web user" is selected.
- C. Check whether an anonymous user is allowed to run agents on the server.
- D. Check whether Jason is in either the "restricted" or "unrestricted" agents list on the server.

Correct Answer: D
