QUESTION 1

Frank has an Purchase Order application where Order lines are created as child documents to the Purchase Order header. The Order lines are displayed in an embedded view. The formula in the first column of the view is @Text($Ref). How might the application be optimized?

A. Use a repeat control whose value is currentDocument.getDocument().getResponses().

B. Use @DbLookup formulas within a repeat control, instead of a View panel.

C. Enable the single copy XPage design on the XPage tab of the Application properties.

D. Use a multivalue field to hold the Order lines, instead of using child documents.

Correct Answer: A

QUESTION 2

Chester has an XPage that is reporting an Error 500 HTTP Web Server: Command Not Handled Exception. How can he get more details about the problem?

A. Double-click Application Properties in the applications navigator, select the XPages tab, and enable the "Display default error page" option.

B. Double-click Application Properties in the applications navigator, select the XPages tab, and disable the "Display default error page" option.

C. Click the Application title in the applications navigator, select the Properties View, select the Design tab, and enable the "Display default errorpage" option.

D. Click the Application title in the applications navigator, select the Properties View, select the Design tab, and disable the "Display default errorpage" option.

Correct Answer: A

QUESTION 3
