Correct Answer: D

QUESTION 4

As part of testing the deployment of the IBM Sterling Selling and Fulfillment Suite, the YFS_HEARTBEAT table has a high number of entries because of server instance starts causing the system to slow down. Which agent should the developer run to remove the older entries from the YFS_HEARTBEAT table?

A. Heartbeat agent

B. Health Monitor agent

C. Purge Heartbeat agent

D. Purge Health Monitor agent

Correct Answer: B

QUESTION 5

A company decides to deploy the IBM Sterling Order Management product in the cloud. The hosting service provider requires the installation to be performed by their own team. After the installation is complete, the release manager of the company verifies the installation. While verifying the installation, the release manager notices that including certain out-

of-the-box JSP pages results in an error. On further investigation, the release manager detects that the factory setup was not loaded completely.

How will the resource manager identify the incomplete tables and load the missing data?

A. There is no way to determines tables left incomplete by the factory setup. The database must be wiped clean and the installation performed again.

B. The list of incomplete tables are available in the *xml restart files generated by the factory setup. The factory setup can be run again to load the missing data.

C. Missing data in tables indicates permission issues. The application user must be re-created with permissions to perform insert, select, update and delete from tables.

D. Incomplete tables can be indentified by comparing their sizes with the sizes provides in the installation guide. The database must be wiped out clean and the installation performed again.

Correct Answer: B
