QUESTION 1

Which of the following statements about the RUN function is TRUE?

A. All maps executed via the RUN function must be in the same map source file.

B. The RUN function can be used to dynamically name source and/or destination files.

C. The first argument of the RUN function can be the name of a functional or executable map.

D. All compiled maps executed via the RUN function must be in the same directory as the calling map.

Correct Answer: B

QUESTION 2

What is the difference between a map called using the RUN function and a functional map?

A. A map called using the RUN function is a compiled map, a functional map is not.

B. A map called using the RUN function is referenced by another map through a map rule, a functional map is not

C. The data sources and target settings are not ignored in a map called using the RUN function, they are ignored in a functional map.

D. The definition for a map called using the RUN function does not need to be in the same map source file as the executable map, the functional map definition does.

Correct Answer: C

QUESTION 3

A map executes with the completion message:

Input type contains errors

Which of the following statements is always TRUE?

A. The map terminated without executing any mapping rules.

B. An audit log was generated with information about the data in error.

C. Input validation ended at the point where the invalid data was encountered.

D. The RESTART attribute was applied to one or more of the data objects in the input type tree.

E. Mapping rules were executed up to the point where the invalid data was encountered in the input.

Correct Answer: D

QUESTION 4

An application developer needs to create a type tree that contains numerous infix delimited groups, and numerous unsigned integer elements. What is the easiest way to create the type tree?

A. Create a group with the group and item properties.

B. Create a category with the group and item properties.

C. Create separate groups for the group properties and the item properties.

D. Create the groups and elements then organize them as a subtype of a category.

Correct Answer: B

QUESTION 5

What is the method for indicating a reference to a specific occurrence of an input object in a map rule?

A. Use the INDEX function with the occurrence number as the argument.

B. Call a functional map and use the COUNT function to track the number of occurrences.

C. Enter the occurrence number in square brackets immediately after the input object name.

D. Use the MEMBER function with the input object name as the first argument and the occurrence as the second argument.

Correct Answer: C
