QUESTION 1

What is the primary difference between a choice group and a partitioned group?

A. A choice group requires that data must be distinguishable; a partitioned group does not.

B. A partitioned group requires that data must be distinguishable; a choice group does not.

C. A choice group can have both items and groups as components; a partition group can only have groups as subtypes.

D. A partitioned group can contain both items and groups as components; a choice group can only contain groups as components.

Correct Answer: C

QUESTION 2

Which two of the following statements regarding functional maps are TRUE? A functional map:

A. is like a subroutine.

B. ignores card adapter settings.

C. can only be called by an executable map.

D. must be in the same source file as the executable map that calls it.

Correct Answer: AB

QUESTION 3

Which of the following is an effect of adding a Restart attribute to an input type tree?

A. The map attempts to reprocess invalid data.

B. The map automatically resets after a map failure.

C. Data validation stops if there are unrecognized objects.

D. Data validation continues, even if there are unrecognized objects.

Correct Answer: D

QUESTION 4

What must the application developer do before a map will run on an operating system other than Windows?

A. Rename the file extension for the compiled map to .mmc.

B. Change all of the component\\'s character sets to NATIVE.

C. Build the map using the "Build for Specific Platform" command.

D. Translate all literal values into the target platform\\'s character set.

Correct Answer: C

QUESTION 5

There is a text item called PutAs that appears as a component in a group and has a range of (1:s). Assume the mapping rule for PutAs is as shown here:

```
=RUN('ProcessOrders.mmc',
        ECHOIN(1, PACKAGE(Order:OrderFile)) +
                '-ac " +
                ' −OF1 " + CarrierName Field:Order:OrderFile + '.t
```

Which two of the following will happen when the map is executed?

A. A variable number of output files will be created depending upon the input data.

B. The name of the output file containing the PutAs item will be determined dynamically based on content in the input.

C. The ProcessOrders map will append its results to a file that is named dynamically according to content in the input.

D. The ProcessOrders map will only generate one output file regardless of how many output cards it has.

Correct Answer: AB
