QUESTION 1

When using the File System Source Connector to process files on other machines, what permissions are needed?

- A. Write access to the target content files only.
- B. Administrator privileges on the local ICC server only.
- C. Read and write access to the target P8 or CM8 repository.
- D. Full access rights to domain machines where the target content files are stored.

Correct Answer: D

QUESTION 2

Access to the archived objects is intended to be done through shortcut links, which component of the ICC software has to be installed?

- A. The ICC SharePoint client extension on every end user's machine.
- B. The ICC web application on the primary node of the ICC installation.
- C. The ICC Push API style set on the machine running the P8 Content Based Search engine.
- D. The P8 SharePoint webparts have to be installed on the machine running the Content Engine of the P8 object store used for the repository.

Correct Answer: B

QUESTION 3

Starting the content manager indexer for text search requires providing the password of an administrative user id. How can the password be provided, therefore avoiding typing it in the command line of the indexer for text? (Choose two.)

- A. Modify the indexing script with the proper password.
- B. The typing of the password in the command line cannot be avoided. It must be entered directly after the -password option.
- C. The password can be stored into a file. The filename can be provided in the command line with the password option prefixing the filename with a colon ":".
- D. The password can be entered in a hidden prompt field after the command line. The hidden field can be requested in the command line with the -password option followed by a question mark "?".
- E. The password can be provided in an environment variable. The name of the environment variable can be provided in the command line with the -password option prefixing its name with an at-sign "@".

Correct Answer: CE

QUESTION 4
