QUESTION 1

A job design consists of an input Sequential Files stage, a Sort stage, followed by a Transformer stage and an output Sequential File stage. In the input Sequential Files stage, the "Number of readers per node" property has been set to 3. The job is run on an SMP machine with a configuration file defined with 3 nodes. The \$APT_DISABLE_COMBINATION variable is set to True.

How many player processes will this job generate?

- A. 6
- B. 8
- C. 10
- D. 12

Correct Answer: B

QUESTION 2

The data going into the target Sequential Files stage is range-partitioned and sorted.

Which technique method would be the most efficient to create a globally sorted target sequential file?

- A. Select an in-stage sort in the final Sequential File stage.
- B. Select the Ordered collector method for the final Sequential File stage.
- C. Select the Sort Merge collector method for the final Sequential File stage.
- D. Insert a Funnel stage before the final Sequential File stage and select Sequence as Funnel Type.

Correct Answer: B

QUESTION 3

In a Transformer, which two mappings can be handled by default type conversions. (Choose two.)

- A. Integer input column mapped to raw output column.
- B. Date input column mapped to a string output column.
- C. String input column mapped to a date output column.
- D. String input column mapped to integer output column.

E. Integer input column mapped to string output column.

Correct Answer: DE

QUESTION 4

Two new columns have been deleted from a sequential file that a number of DataStage jobs write to. You have imported a table definition for the changed file. How can you determine what jobs might be affected by this change?

- A. Select the new table definition, right-click, then click on the Where used command.
- B. Select the original table definition, right-click, then click on the Where used command.
- C. Select the original table definition, right-click, then click on the Find dependencies command.
- D. Select the new table definition, right-click, click on the Compare against command, then select original table definition.

Correct Answer: B

QUESTION 5

What is the purpose of the APT_DUMP_SCORE environment variable?

- A. There is no such environment variable.
- B. It is an environment variable that turns on the job monitor.
- C. It is an environment variable that enables the collection of runtime performance statistics.
- D. It is a reporting environment variable that adds additional runtime information in the job log.

Correct Answer: D
