#### QUESTION 1

Once changes are introduced in a Rules Set, which option confirms the new rules set works properly with your data?

- A. Run the Rules Tester.
- B. Have users check manually.
- C. Check the Unhandled tokens.
- D. Run the job again and confirm results.

Correct Answer: D

---

#### QUESTION 2

Which statement would NOT be a purpose for the matching process?

- A. Creating the best record in the group.
- B. Reconciling inventory or transactions.
- C. Locating entities in a data warehouse.
- D. Grouping records with the same or similar values, such as householding.

Correct Answer: B

---

#### QUESTION 3

What is the most optimized way to pass data between jobs?

- A. Storing data in XML.
- B. Storing data in text files.
- C. Storing data in parallel datasets.
- D. Storing data in indexed database tables.

Correct Answer: A

---

#### QUESTION 4

When considering address certification versus address validation, which statement is true?

- A. The USAC module will fully parse as well as certify addresses.
- B. Both USAC and AVI modules will correct addresses when possible.

C. Validation and certification are interchangeable terms. They each mean the same thing with regards to address processing.

D. QualityStage address certification modules will only mark a record as certified. The AVI module must be used to validate and correct addresses.

Correct Answer: D

---

#### QUESTION 5

A match review was just completed and determined that individuals with different middle names are being grouped together.

Which option would be effective in breaking these two individuals apart?

- A. Decrease the value of the m-prob for the middle name
