QUESTION 1

What is the correct restructure stage to extract data from four input columns (three of which carry vectors) and output them into two columns with one vectors in a subrecord and the non-vector carrying column being passed through the stage?

- A. Column Export Stage
- B. Column Import Stage
- C. Split Subrecord Stage
- D. Make Subrecord Stage

Correct Answer: B

QUESTION 2

Which two features of Data Sets make them suitable for job restart points? (Choose two.)

- A. They are persistent.
- B. They are indexed to improve access.
- C. They are compressed to minimize storage space.
- D. They use the same data types as the parallel framework.

Correct Answer: AD

QUESTION 3

What two data sources support direct lookups? (Select two) A. DB2

- B. ODBC
- C. Oracle
- D. Teradata
- E. SqlServer

Correct Answer: AC

QUESTION 4

You have been given operational requirements to introduce data recovery to one of your parallel job designs. Additionally, you have been told that you are to use flat files as your intermediate data structure. Which two tasks will accomplish these objectives? (Choose two.)

- A. Use the Sequential stage to export and import data between jobs.
- B. Enable checkpoint restartability in each of your parallel stages.
- C. Break up the design by splitting it into at least two parallel jobs.
- D. Use the Hash File stage to write and read data between parallel jobs.

Correct Answer: AC

QUESTION 5

There is a requirement to transfer a large file using an FTP Enterprise stage. How can you minimize processing time when a transfer failure occurs?

- A. Specify restartable mode on a transfer of the single file.
- B. Manually split the file into multiple files and specify restartable mode on a transfer.
- C. Create multiple readers to transfer file data and specify restartable mode on Input link tab.
- D. Use a sequencer to check transfer status and restart the job from the beginning on failure.

Correct Answer: B
