QUESTION 1

Which statement about primary keys is true?

- A. A table can have multiple primary keys.
- B. A primary key accepts one, and only one, NULL value.
- C. A unique index, with matching columns of the primary key, must be created before a primary key can be created.
- D. A unique bidirectional index is automatically created for the columns of the primary key, if an appropriate unique index does not already exist.

Correct Answer: D

QUESTION 2

Which command is used to import connectivity configuration information from a file known as a configuration profile?

- A. db2ca
- B. db2cfexp
- C. db2cfimp
- D. db2cfgimp

Correct Answer: C

QUESTION 3

By analyzing EXPLAIN data, you notice that a table scan is being performed instead of an index scan even though an index exists. In order to utilize the existing index, what should be done before issuing the RUNSTATS command to collect statistics for both the index and table?

- A. Drop and reload the table.
- B. Drop and recreate the index.
- C. Reorganize the table to cluster its data according to that index.
- D. Reorganize the table to cluster its index according to that query plan.

Correct Answer: C

QUESTION 4

What authority is required to create, alter and drop workload management objects?

- A. SYSADM
- B. SECADM
- C. WLMADM
- D. ACCESSCTRL

Correct Answer: C

QUESTION 5

How can you obtain information about any changes that have been made by the Self-Tuning Memory Manager (STMM)?

- A. By using the change history event monitor.
- B. By using the DB2 problem determination tool.
- C. By examining the contents of the system catalog.
- D. By examining the DB2 administration notification log file.

Correct Answer: A
