QUESTION 1

Row and column level security can be implemented using mask and permissions. Which two DB2 authorities are able to create a mask or permission? (Choose two.)

A. SECADM authority.

B. ACCESSCTRL authority.

C. DATAACCESS authority.

D. SYSADM authority when SEPARATE_SECURITY=NO.

E. The owner of the object as he/she has that authority implicitly.

Correct Answer: AD

QUESTION 2

What is a consideration when specifying DATA CAPTURE CHANGES?

A. Can be specified for capturing changes to an XML object.

B. To minimize logging, specify NOT LOGGED when DATA CAPTURE CHANGES is specified.

C. REFRESH TABLE statement is not allowed with a table defined with DATA CAPTURE CHANGES.

D. You cannot turn on DATA CAPTURE CHANGES if the table space is in advisory REORG- pending.

Correct Answer: D

QUESTION 3

What must be done in order to audit read access to a table?

A. AUDIT ALL must be set on the table and an audit trace must be started.

B. An EDITPROC must be defined on the table and an audit trace must be started.

C. DATA CAPTURE CHANGES must be set on the table and the DB2 log must be captured.

D. A security label column should be defined on the table within a trusted context.

Correct Answer: A

QUESTION 4

Poorly tuned memory can affect application performance, such as having sequential prefetch turned off. Which statistic should you monitor from the statistics report to be sure this is not occurring?

A. PREF.DISABLED-NO BUFFER

B. PREF.DISABLED-NO READ ENG

C. BUFF.UPDATES/PAGES WRITTEN

D. PAGES WRITTEN PER WRITE I/O

Correct Answer: A

QUESTION 5

What is a potential consideration when using triggers?

A. They are not invoked by the LOAD REPLACE utility.

B. When using views, the underlying tables cannot have a trigger defined.

C. RI and check constraints are evaluated prior to any trigger invocation.

D. They run in a WLM managed address space, so invoking them frequently (e.g. when using a row level trigger) can be costly.

Correct Answer: A
