QUESTION 1

When modeling data to provide for a physical design, which of the following defines the data types for the columns in the DB2 physical table?

- A. Domain
- B. Entities
- C. Attributes
- D. Primary Key

Correct Answer: C

QUESTION 2

How do you enable parallelism in a dynamic SQL statement?

- A. BIND with DEGREE(1)
- B. BIND with DEGREE(ANY)
- C. Use SET CURRENT DEGREE = ANY
- D. Use SET CURRENT DEGREE = '\\1\\'

Correct Answer: C

QUESTION 3

DB2 workfiles are critical to performance of applications. Which of the following will NOT assist with achieving best performance for workfile usage?

- A. Create several 4K and 32K workfiles.
- B. Assign workfiles to their own bufferpools.
- C. Assign workfiles to their own DASD volumes.
- D. Create one large workfile for the data sharing group.

Correct Answer: D

QUESTION 4

When creating a stored procedure that will access non DB2 resources using the authorization ID of the user invoking the stored procedure, what value must the SECURITY clause specify?

- A. DB2
- B. RACF
- C. USER
- D. DEFINER

Correct Answer: C

QUESTION 5

When planning for backup/recovery (including disaster recovery), which statement is correct?

- A. When you remote copy everything (PPRC, XRC) there is no need to take DB2 image copies anymore.
- B. As data is shared in a data sharing group, disaster recovery in a data sharing environment is identical to a non-data sharing environment.
- C. System level backups (BACKUP SYSTEM) can be used for both system wide restore on a remote site, as well as the recovery of individual objects locally.
- D. When you want to create a consistent backup point, you must use the -SET LOG SUSPEND command to freeze all activity, and then take your backups with whatever technology you prefer.

Correct Answer: C
