### QUESTION 1

What is the one significant difference between sequence objects and identity columns?

- A. Identity columns can cache values and sequence objects cannot.
- B. Identity columns can be defined on tables and sequence objects cannot.
- C. Sequence objects can have a character data type and identity columns cannot.
- D. Sequence object values can be used as primary keys and identity column values cannot.

Correct Answer: B

---

### QUESTION 2

If SEGSIZE 64 and MAXPARTITIONS 10 are specified in a CREATE TABLESPACE statement, what type of table space is created?

- A. LOB table space.
- B. Segmented table space.
- C. Range-partitioned table space.
- D. Partition-by-growth table space.

Correct Answer: D

---

### QUESTION 3

What must be done in order to audit read access to a table?

- A. AUDIT ALL must be set on the table and an audit trace must be started.
- B. An EDITPROC must be defined on the table and an audit trace must be started.
- C. DATA CAPTURE CHANGES must be set on the table and the DB2 log must be captured.
- D. A security label column should be defined on the table within a trusted context.

Correct Answer: A

---

### QUESTION 4

The access path chosen for a query shows a table space scan, when it appears that there is an index available that would provide a more efficient access path. What situation could have caused a table space scan to be chosen instead of the index?

- A. Index is created with PCTFREE of zero.
- B. The number of columns in the index is less than four.
- C. RUNSTATS were run when there were no rows in the table.
- D. RUNSTATS were run when there was a million rows in the table.

Correct Answer: C

---

#### QUESTION 5

Why does the following DDL command fail? CREATE INDEX X1 ON T1 (COL1, COL2, COL3, BUSINESS\_TIME WITHOUT\_OVERLAPS);

- A. The index must be partitioned.
- B. The index must use page size > 4K.
- C. The index must be defined as UNIQUE.
- D. The index must be defined as CLUSTER.

Correct Answer: C
