QUESTION 1

A storage group named HOT_SG was created as follows:

```
CREATE STOGROUP hot_sg  
ON '/mnt/ssd_path1', '/mnt/ssd_path2'  
OVERHEAD 0.75  
DEVICE READ RATE 500  
DATA TAG 1  
SET AS DEFAULT
```

What does the DATA TAG 1 clause do?

- A. It indicates that the multiple storage paths referenced in the HOT_SG storage group definition exist in one physical location.
- B. It tells the DB2 Optimizer that database objects stored in the HOT_SG storage group are to be given preference over other objects when data access plans are generated.
- C. It indicates that the value 1 is to be assigned to data stored in the HOT_SG storage group, which Workload Manager (WLM) can then use to determine the processing priority to assign to database activities that interact with this data.
- D. It assigns a unique identifier to the instance of the HOT_SG storage group being defined; this identifier can then be used when moving table spaces to and from the storage group, when dropping the storage group, or when commenting on the storage group.

Correct Answer: C

QUESTION 2

A table named MYTAB was created as follows:

```
CREATE TABLE mytab (c1 INT, c2 INT)  
PARTITION BY RANGE (c1)  
(STARTING FROM (1) ENDING AT (100),  
STARTING FROM (201) ENDING AT (300));
```

If the following statements are executed:

```
INSERT INTO mytab VALUES (1,1),(2,1),(3,1),(101,1);  
INSERT INTO mytab VALUES (4,1),(5,1),(6,1),(201,1);  
INSERT INTO mytab VALUES (7,1),(8,1),(9,1),(300,1);
```

How many rows will be inserted into the MYTAB table?

- A. 4
- B. 8

C. 11

D. 12

Correct Answer: B

QUESTION 3

A DBA wants to create a table named SALES that has the following characteristics:

Data for the first half of the year will reside in table space TBSP1; the index for this data will reside in table space TBSP21.

Data for the second half of the year will reside in table space TBSP2; the index for this data will reside in table space TBSP22. Which clause must be used with the CREATE TABLE statement to define this table?

A. DISTRIBUTE BY HASH

B. PARTITION BY RANGE

C. ORGANIZE BY DIMENSIONS

D. ORGANIZE BY KEY SEQUENCE

Correct Answer: B

QUESTION 4

What is a benefit of multi-temperature data storage?

A. It helps reduce redundant I/O.

B. It helps improve data compression ratios.

C. It helps reduce storage costs for infrequently accessed data.

D. It helps identify data access patterns to aid in storage planning.

Correct Answer: C

QUESTION 5

Which item is NOT eligible for adaptive compression?

A. Indexes

B. Base tables

C. Temporary tables

D. Inline LOB values

Correct Answer: C
