-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

A Fortune 100 company is migrating its Enterprise Application Integration (EAI) architecture to SOA. The intent is to begin exposing its capabilities to business partners. The CIO is thinking about building a high speed, custom messaging solution so there is capacity for future growth. What should the SOA Designer say about the long-term implications of that direction?

- A. A custom messaging solution could provide performance advantages if development priority is allocated to provide standards-based connectors and adapters for business partners to connect.
- B. XML messages can be transformed at wire speed using Enterprise Service Bus (ESB) appliances like WebSphere DataPower SOA Appliance, so it is not necessary to be concerned with that part of the system's performance.
- C. Total cost of ownership will increase with custom middleware. Open standards-based commercial messaging products are more interoperable, extensible, scalable, replaceable, and reliable than custom- built systems.
- D. It will take a serious commitment to detailed technical support to make this happen. It is always a tradeoff between standards-based compliance and performance. The implementation of the custom messaging will need to provide serious performance advantages to business partners.

Correct Answer: C

---

### QUESTION 2

A small company has recently developed a set of services to provide access to customer information. They have a mature management environment following the ITIL best practices. These services are being shared across a number of

business units. The company wants to provide appropriate chargeback for use of these services.

What should be recommended to provide this chargeback?

- A. Use the existing service monitoring data.
- B. Measure the service usage by service consumer.
- C. Measure the service usage by using the service registry.
- D. Use the existing transaction tracking monitoring data.

Correct Answer: B

---

### QUESTION 3

A company wants to integrate a number of existing best-of-breed applications by implementing service facades and an Enterprise Service Bus (ESB). The initial scenario involves the transfer of order information between a number of these backend services depending on business rules. An SOA Designer is asked to capture the functional requirements.

What is the most appropriate starting point?

- A. Analysis of the information requirements of the existing applications

- B. Investigation into appropriate industry standards for transferring data
- C. Creation of use cases to understand what the services may be and how they interact
- D. Define the component model associated with the existing applications and specify the service interfaces

Correct Answer: C

#### QUESTION 4

A photo printing business has a central headquarters and approximately 5000 store fronts. Their latest project involves a website where customers can print their photos at the store location of their choice. The plan is to use a service hosted at each store front and route requests to the correct store.

Which patterns should be considered when designing this solution?

- A. Self-service, federated Enterprise Service Bus (ESB), service registry, caching
- B. Self-service, business delegate, extended enterprise, brokered ESB gateway
- C. Agent, router, exposed business services, multiple step information population
- D. Collaboration, ESB, facade, federated repository

Correct Answer: A

#### QUESTION 5

The employees of a large insurance firm use several applications that reside in CICS. There is also an existing application server and an in-house developed customer management system. Each application provides its own interaction

services using different protocols and UIs.

Which pattern is the most appropriate to create unified access to the existing applications?

- A. Expose application functionality as services and create a portal for access.
- B. Wrap application functionality as information services and present using Java Server Faces.
- C. Create an AJAX front end which uses REST calls to access the back end APIs.
- D. Use a Web services gateway to access the existing systems and integrate the information by creating a consistent Web 2.0-based user interface.

Correct Answer: A
