QUESTION 1

An administrator has been notified that a new flow has to be deployed in production and needs to be configured for high throughput. The MQ messages that would get processed are of less than 1K in size, non-persistent and independent of each other. Which option can the administrator apply to increase throughput with the least administrative overhead?

- A. Create a new broker that would process messages exclusively for this queue.
- B. Create two new execution groups and deploy the flow in each of the execution group.
- C. Change the Additional Instances parameter to 300 in the broker archive file and deploy.
- D. Increase the commit count to 20 and Additional Instances parameter to 20 in the broker archive file and deploy.

Correct Answer: D

QUESTION 2

An administrator needs to configure a property of the Broker SOAPListener to ensure that it will meet a new requirement. The property is not currently configurable. What action should the administrator take to meet this need?

- A. Open a Requirement.
- B. Open a Problem Management Report (PMR).
- C. Alter the config.xml of the Axis engine.
- D. Use the Admin API to update the execution group.

Correct Answer: A

QUESTION 3

An administrator needs to update an existing Problem Management Record (PMR) with specific technical information. How can the administrator perform this activity in the least amount of steps?

- A. Use IBM Electronic Service Agent to update the PMR.
- B. Log into the Passport Advantage web page and update the PMR.
- C. Log into the Electronic Service Request (ESR/SR) tool and update the PMR.
- D. Contact IBM Support by phone using your region-specific telephone number.

Correct Answer: C

QUESTION 4

A company has a broker environment where message flows belonging to a specific business unit were connecting to an

LDAP Server LDAP1 using anonymous bind for authorization. Later the company asks the administrator to extend the broker environment to another business unit that had their own LDAP Server LDAP2. The administrator runs the following command to achieve this: `mqsisetdbparms -n ldap::LDAP -u username -p password` The administrator is then notified that the message flows that were using LDAP Server LDAP1 started throwing errors. What should the administrator do to resolve the problem?

- A. Restart the LDAP Server LDAP1.
- B. Run the command `mqsireloadsecurity`
- C. Run the command `mqsisetdbparms -n ldap::LDAP1 -u anonymous -p password`
- D. Delete the entry for `ldap::LDAP` and use the command `mqsicreateconfigurablesevice` to specify LDAP2 username and password.

Correct Answer: C

QUESTION 5

An administrator has experienced an issue with a message flow that receives email. In order to troubleshoot this issue, the administrator has collected a service trace. What MUST the administrator do to get this trace analyzed?

- A. Open a Problem Management Report.
- B. Run the `mqsiformatlog` command.
- C. Upload the trace file to developerWorks.
- D. Import the trace into the IBM Support Portal.

Correct Answer: A
