QUESTION 1

Which Worklight pre-defined authenticators can be used to secure an application that requires the user to login with a user ID and password?

A. Form-based authenticator or Header-based authenticator

B. Form-based authenticator or Adapter-based authenticator

C. Adapter-based authenticator or Header-based authenticator

D. Form-based authenticator, Adapter-based authenticator or Header-based authenticator

Correct Answer: B

QUESTION 2

A Worklight mobile application uses a native page to display a real-time graph of the price of a stock symbol. The native page is invoked from a web page using the WL.NativePage.show() method and requires a parameter that contains the value of the stock symbol to display. To pass the value of "IBM" as a parameter to the native page using the parm variable, how should the variable be initialized before passing it to the method?

A. var parm = "IBM";

B. var parm = ["IBM"];

C. var parm = {symbol: "IBM"};

D. var parm = ["symbol", "IBM"];

Correct Answer: C

QUESTION 3

A Worklight application does not need to connect to a server on startup. However, when previewing the application on the device emulator, it is throwing a server connection error on start up. What is the consequence if the connection error is resolved using the WL.Client.init({connectOnStartup:false}) API to disable the connection to the server on application startup?

A. The application will not be able to subsequently connect to the server.

B. Server features other than the Remote Disable or Direct Update will be disabled.

C. Any server features the application uses will only be available when it connects to the server.

D. There will be no potential consequences as the runtime will safely disable server connectivity errors.

Correct Answer: C

QUESTION 4

What are the server-side configuration requirements to enable collection of analytics data for reporting?

A. Configuration of parameters in the worklight.properties file to enable raw data collection and database connectivity.

B. Configuration of parameters in the worklight-server.xml file to enable raw data collection and database connectivity.

C. Configuration of parameters in the worklight-reports.properties file to enable raw data collection and JNDI database connectivityparameters in the resources.xml file.

D. Configuration of parameters in the worklight-server.properties file to enable raw data collection and JDBC database connectivityparameters in the resources.xml file.

Correct Answer: A

QUESTION 5

What namespace is used for the Worklight API?

A. W

B. WL

C. Worklight

D. WLite

Correct Answer: B
