### QUESTION 1

A developer is writing a Worklight mobile application to run on Android and iOS platforms. The developer is using the Apache Cordova device.platform API in the code to identify the device's platform type. Which additional step, if any, should the developer perform before building and deploying the application to successfully use the Apache Cordova API?

- A. Set the element to true in the application's descriptor file to indicate the use of Cordova.
- B. Copy the cordova.jar library file to the project's server folder to make it available to the application at run-time.
- C. No additional step is required since the Cordova framework is automatically added into Worklight iOS and Android projects.
- D. Add a element to the application's main HTML file to include the cordova.js JavaScript file that defines the API functions.

Correct Answer: C

---

### QUESTION 2

A developer is implementing an HTTP adapter that connects to a public web service. After performing field tests, the developer has observed that the adapter times out too frequently.

What is the correct way to set the adapter's timeout period?

- A. The timeout is set as part of the `invocationData` parameter passed to the `WL.Server.invokeHttp` function:
- ```
var invocationData = {
    method : 'get',
    returnedContentType : 'xml',
    path : '/service/api/xml',
    timeout : 15000
};
WL.Server.invokeHttp(invocationData);
```
- B. The timeout is set as part of the `options` parameter passed to the `WL.Client.invokeProcedure` function:
- ```
var invocationData = {
    adapter : 'MyAdapter',
    procedure : 'getData',
    parameters : [ ]
};
var options = {
    onSuccess : successFunction,
    onFailure : failureFunction,
    timeout: 15000
}
WL.Client.invokeProcedure(invocationData, options);
```
- C. The timeout is an optional element of the adapter's `<connectionPolicy>` XML tag:
- ```
<connectionPolicy
    xsi:type="http:HTTPConnectionPolicyType">
    <protocol>http</protocol>
    <domain>hostname.com</domain>
    <port>80</port>
    <timeout>1500</timeout>
</connectionPolicy>
```
- D. The timeout is set as part of the `invocationData` parameter passed to the `WL.Client.invokeProcedure` function:
- ```
var invocationData = {
    adapter : 'MyAdapter',
    procedure : 'getData',
    parameters : [ ],
    timeout: 15000
};
var options = {
    onSuccess : successFunction,
    onFailure : failureFunction
}
WL.Client.invokeProcedure(invocationData, options);
```

- A. Option A  
B. Option B  
C. Option C D. Option D

Correct Answer: B

### QUESTION 3

A developer has deployed a Worklight mobile application to a remote Worklight Server environment using a context root of `app1` and wants to update one of the application's server-side components. Which Worklight console should the developer use to re-deploy the component?

- A. The Worklight console on the remote server accessed through the URL:  
`http://remoteServerHostName:portNumber/console`.
- B. The Worklight console in the local development environment accessed through the URL:  
`http://localhostName:portNumber/console`.
- C. The application-specific Worklight console on the remote server accessed through the URL:`http://remoteServerHostName:portNumber/app1/console`.
- D. The application-specific Worklight console in the local development environment accessed through the URL:`http://localhostName:portNumber/app1/console`.

Correct Answer: C

---

#### QUESTION 4

Which of the below should not be a part of Shell component?

- A. Authentication module
- B. Native functionality JavaScript wrapper
- C. Application UI components
- D. Company logo that should be shared between several application

Correct Answer: C

---

#### QUESTION 5

The correct place to specify the application's metadata is \_\_\_\_\_.

- A. `authenticationConfig.xml`
- B. `worklight.properties`
- C. `application-descriptor.xml`
- D. This setting should be done separately per platform in a dedicated settings file

Correct Answer: C
