QUESTION 1

An administrator needs to update an HMC from V7 P7.3 to V7 P7.5 and plans to use a remote server to install the new HMC code.

Which remote servers or file systems are available for the update?

- A. NIM, NFS
- B. FTP1, NFS
- C. TFTP, FTP
- D. HTTP, NIM

Correct Answer: B

QUESTION 2

After an abnormal IPL, jobs that are accessing some files for the first time are spending an extended amount of time in a status of "IDX" and are taking longer to complete. Which command should be used to enable all pending access path rebuilds to be analyzed, prioritized, and immediately executed rather than waiting for first access?

- A. WRKEFD
- B. EDTRBDAP
- C. WRKAPSTS
- D. WRKJOBAP

Correct Answer: B

QUESTION 3

An administrator issues the WRKSYSACT command on a system partition using dedicated processors and the following result displays: Current processing capacity 2

What does the current processing capacity value indicate?

- A. The percentage of CPU currently available for system jobs.
- B. The share of the physical processors in the pool it is running.
- C. The number of processing units currently assigned to the partition.
- D. The number of virtual processors that are currently active in the partition.

Correct Answer: C

QUESTION 4

During a full system restore the sign on screen is displayed before the restore completes. Which system value is the most likely cause?

- A. Restore Abend action (QRSTABD) is set to *SIGNON.
- B. Allow Object Restore (QALWOBJRST) is NOT set to *All.
- C. Verify Object Restore (QVFYOBJRST) is set to 3 or higher.
- D. Job message queue full action (QJOBMSGQFL) is set to *NOWRAP.

Correct Answer: D

QUESTION 5

A "previous release to current release" system migration is being performed. An application on the source system manages image files stored in the IFS, viewed using PCs.

The Go Save menu, option 21 (full system save), was used to create the backup tape used in the migration process.

After the data is migrated and the new system set up, none of the images are available.

Which situation on the source system IFS directory, at the time of the backup, is the most likely cause of the problem?

- A. The "Hidden file" attribute was set to "Yes"
- B. The "Can be saved" attribute was set to "No".
- C. The "Need to archive (PC)" attribute was set to "Yes".
- D. The "Need to archive (System)" attribute was set to "No".

Correct Answer: B
