QUESTION 1

If you need to install a CA Process Automation agent on the UNIX platform, which factor should you consider?

- A. The domain_url field must contain /itpam/.
- B. The agent installer can only be run in interactive mode.
- C. The agent installer will install Java as part of the agent install.
- D. The domain orchestrator needs to be up and running during the install.

Correct Answer: D

QUESTION 2

When you plan your CA Process Automation deployment, which architecture-related factors should you consider? (Choose three)

- A. Multiple domains can be added to an environment.
- B. Installing a domain orchestrator creates a new CA Process Automation domain.
- C. Orchestrators and agents communicate bidirectionally to perform process operations.
- D. While agents can only exist in a single environment, orchestrators can be configured to be used in multiple environments.
- E. A new universally unique identifier (UUID) is generated in the Domain .xml file to identify any new environments you create.

Correct Answer: BCE

QUESTION 3

When you test a new process in CA Process Automation, you discover that an error is causing one of the operators to fail. To determine the cause of the failure, the most effective strategy is to first examine the:

- A. c2o Jog file
- B. global data set
- C. process dataset
- D. operator dataset

Correct Answer: D

QUESTION 4

You have successfully completed the Web Services Description Language (WSDL) wizard. Now you need to select an input source for the Invoke SOAP Method operator. Which input source is INVALID?

- A. WSDL URL
- B. In line text
- C. Expression
- D. Preformatted Simple Object Access Protocol (SOAP) file

Correct Answer: A

QUESTION 5

You need to implement failover-safe CA Process Automation touch points. Which CA Process Automation agent deployment guideline should you follow?

- A. Use a single agent deployed on a powerful hardware platform for each touch point.
- B. Use a single agent deployed on a powerful hardware platform and map that agent to multiple touchpoints.
- C. Use multiple agents deployed on different servers, map these agents to a single touch point, and configure different priorities for the agents.
- D. Use multiple agents deployed on the same server, map these agents to a single touchpoint, and configure different priorities for these agents.

Correct Answer: C
