QUESTION 1

Sue White is responsible for approving notebook upgrades. Sue is notified by email that she needs to approve an upgrade request. When Sue logs into CA Process Automation and right clicks the task, which menu options are available? (Choose two)

- A. Take
- B. Reply
- C. Escalate
- D. Approve

Correct Answer: AB

QUESTION 2

When you import a process object, CA Process Automation:

- A. Reverts to the last baseline of the imported object.
- B. Enables you to select import options on the Configuration tab.
- C. Creates a version of the object that enables you to select and edit any past versions of the process.
- D. Creates a version of the object in the library that incorporates any changes you made to the process instance before the export.

Correct Answer: D

QUESTION 3

You have installed a CA Process Automation agent on a host. Now you want to associate the current environment with the agent host. To do this, you need to configure:

- A. A module.
- B. A touch point.
- C. The domain orchestrator.
- D. CA Embedded Entitlements Manager (CA EEM).

Correct Answer: B

QUESTION 4

When you configure host groups, which steps do you need to perform? (Choose three)

- A. Lock the environment.
- B. Associate the host group to at least one agent.
- C. Specify the credentials to connect to the remote host using Secure Shell (SSH).
- D. Create a trust relationship between the hosts in the group and a target remote host referenced in the group.
- E. Specify the touch point name that content designers will use as the target for operations directed at the group.

Correct Answer: ABC

QUESTION 5

You need to integrate CA Process Automation with an external application. A data value or status change in the application will result in a CA Process Automation process starting, continuing, or stopping. Which approach enables you to minimize any potential impact on performance?

- A. Send an email into a mailbox monitored by a CA Process Automation mail trigger.
- B. Continuously poll the external application from the CA Process Automation process to ascertain if data values or statuses in its database change.
- C. Continuously check for a predefined file that the external application will be configured to create in a commonly accessible file system when data values or statuses change.
- D. Send an event to CA Process Automation from the external application when data values or statuses change with a data payload, which will start, continue, or stop the execution of a designated CA Process Automation process.

Correct Answer: D
