QUESTION 1

A business unit of a transnational manufacturer wants to implement a robust process for addressing integrity-critical equipment deterioration incidents. Timely and complete resolution of such incidents is vital for the business unit\\'s continuous safe and profitable operation. Treating each incident involves many employees from different departments extensively collaborating and exchanging information. That information is spread across multiple systems having their access limited to particular user groups. With the current manual process, some incidents get forgotten and remain unresolved for years.

The project\\'s Sponsor is an Equipment Integrity and Reliability Advisor, who moved into this position from another business unit. That business unit implemented a proprietary application to integrate the information and to assist in tracking and managing the incidents. Having a positive experience with the application, the Sponsor is suggesting to customize it and reuse in the new business unit.

The business unit\\'s Enterprise Architect (EA), who is responsible for assessing solution options and presenting them to executive decision makers, has a few concerns with adopting the existing application. The application uses point-to-point interfaces with other data sources whereas the business unit\\'s target architecture relies on a data warehouse-based integration. Moreover, the two business units use different legacy systems, as well as different front-end implementation technologies. Additionally, the existing application is monolingual, while the business unit needs user interfaces and some data to be presented in two languages. With all of this, it may be easier to build a new application from scratch than to customize the existing one. To understand which option is better, the EA asks a business analyst (BA) to define business requirements.

The EA wants to understand whether the integration capabilities of the existing solution match the business unit\\'s IT landscape. The requirement definition that the EA needs should read as, "Each record of an incident shall _____."

A. be associated with the unit of equipment to which it belongs."

B. include the associated equipment\\'s information from the asset management system."

C. contain the ID of the equipment to which it belongs."

D. be related to a unit of equipment using the Equipment ID stored in the asset management system."

Correct Answer: B

QUESTION 2

Which of the following types of charts shows which resources are needed in the project and allows you to group the resources by project phase or other attributes?

A. Pareto chart

B. Organizational Breakdown Structure

C. Gantt chart

D. Resource Breakdown Structure

Correct Answer: D

QUESTION 3

A business analyst (BA) is working on an initiative to decommission a legacy system and has discovered the requirement: "Ability to view policies created in the legacy system for a period of 6 months." How should the BA classify the requirement based on the requirements classification schema?

A. Business Requirement

B. Non-functional Requirement

C. Functional Requirement

D. Transition Requirement

Correct Answer: D

QUESTION 4

After determining that the enterprise culture was the driving force behind recent solution change decisions, a business analyst (BA) has decided to conduct an enterprise-wide cultural assessment. What information can the BA expect to learn from the results?

A. Whether the stakeholders view the solution as something beneficial

B. Whether there will be an organizational impact as a result of the change.

C. That changes to the enterprise culture will better drive its actions

D. That internal dependencies limit the performance of the entire solution

Correct Answer: B

QUESTION 5

Which of the following software development life cycles is a methodology that divides the project into phases, and the project manager focuses on control of time, cost, and scope?

A. Spiral

B. Agile

C. Waterfall

D. Incremental

Correct Answer: C
