QUESTION 1

Two independent organizations want to share authentication and other employees' attributes to leverage a central online collaboration tool for a common project. Which of the following will allow the two companies to keep their internal authentication system while allowing visibility into the other company's employees' attributes?

- A. Role-based access control
- B. Federation
- C. Single sign-on
- D. Multi-factor authentication

Correct Answer: B

QUESTION 2

An administrator is building a sandbox environment. There is one host assigned to the resource pool with eight CPU cores available. There will be two highly utilized, identical virtual application servers and three virtual desktops running in this environment. One of the virtual desktops will be running a new management application for the environment. Which of the following is the BEST recommended configuration for the sandbox environment?

- A. Configure the management virtual desktop with three CPUs, and the other virtual desktops with one CPU each; configure one application with two CPUs and the other application server with one CPU
- B. Configure the application servers with two CPUs each; configure two virtual desktops with one CPU each and two CPUs for the management virtual desktop
- C. Configure the virtual desktops with two CPUs each; configure the application servers with one CPU each
- D. Configure one application server with three CPUs and the other with two CPUs; configure the virtual desktops with one CPU each

Correct Answer: B

QUESTION 3

A company just received a shipment of brand new blade servers and an administrator has been tasked with virtualizing the blade fabric switches. Which of the following would be used to accomplish this?

- A. iSNS
- B. V2P
- C. P2V
- D. NPIV

Correct Answer: D

QUESTION 4

Several servers are connected to a SAN using three storage devices and FCoE for transmissions. These servers only need to access one SAN device. All servers, the SAN, and the HBA are virtualized. Which of the following should be used to ensure access is controlled appropriately between devices? (Select TWO).

- A. LUN Masking
- B. Hard Zoning
- C. Supernetting
- D. Soft Zoning
- E. Subnetting

Correct Answer: AD

QUESTION 5

An administrator deployed ten application servers from a single VM template. A senior administrator notices that these ten VMs are not using their resources efficiently. Which of the following is MOST likely the issue with the new servers?

- A. The dynamic resource pool is malfunctioning.
- B. The server is missing security patches.
- C. The VM servers were not properly configured.
- D. There are insufficient resources available on the host.

Correct Answer: C
