QUESTION 1

Which of the following are valid variable Processing Types? (Choose four)

- A. Manual Entry / Default Value
- B. Replacement Path
- C. Customer Exit
- D. Formula
- E. Authorization

Correct Answer: ABCE

QUESTION 2

What does the Data Transfer Process (DTP) do? The Data Transfer Process transfers data: (Choose two)

- A. From source systems to the PSA table of a DataSource.
- B. From the PSA table of a DataSource to InfoProviders such as InfoCubes or DataStore Objects.
- C. To Open Hub Destinations.
- D. To the BI Accelerator. During this transfer the data will be automatically transformed and compressed.

Correct Answer: BC

QUESTION 3

Which of the following statements regarding BEx Query Designer are correct? (Choose three)

- A. Before defining a formula, you must ensure you have already created any restricted key figures that will be referenced in the formula.
- B. You can only drag and drop multiple characteristics into the query definition if they come from the same dimension.
- C. You can save a query that contains errors.
- D. If a query contains errors, the system provides information to help you correct them, including menu options that may be suitable.
- E. You can maintain many of the properties of multiple characteristics or key figures simultaneously.

Correct Answer: CDE

QUESTION 4

What should you do to ensure that an attribute can be used as a navigation attribute in reporting? (Choose two)

- A. In the InfoObject maintenance for a characteristic, define the attribute as a navigation attribute.
- B. Activate the attribute for navigation in the Aggregate maintenance.
- C. Activate the attribute for navigation at InfoProvider level.
- D. Activate the attribute for navigation at DataSource level.

Correct Answer: AC

QUESTION 5

Regarding currency translation, which of the following statements are true? (Choose two)

- A. Translating currency at query execution time helps improve query response time for the user.
- B. Translating currency during query execution provides for maximum flexibility in the choice of target currency.
- C. Translating currency at data load time is best since the user will never want to use different currency exchange rates.
- D. Translating currency as data is loaded using transformations can improve query performance by avoiding currency translation at query execution time.

Correct Answer: BD
