QUESTION 1

When should VirtualProviders based on Data Transfer Processes be used? (Choose three)

A. When real-time data is needed from source systems.

B. When only small data volumes are transferred to the queries.

C. When a query is executed several times a day by many users.

D. When the query is executed by only a few users at the same time and the data volume required is low.

E. When the query requires large data volumes.

Correct Answer: ABD

QUESTION 2

Characteristic value variables...

A. ...are created in the query definition and are therefore only available in that query definition.

B. ...are created for a characteristic in the query definition and are available for all query definitions of the same InfoProvider.

C. ...are created for a characteristic in the query definition and are available for all query definitions of InfoProviders containing this characteristic.

D. ...can be created for global use on an InfoProvider level, and can be created for local use in the query definition.

Correct Answer: C

QUESTION 3

In the BEx Web Analyzer, when creating an exception for an analysis using the Exception Wizard, which of the following features are available? (Choose three)

A. You can specify that the exception is either a \\'Status\\' exception for absolute numbers, or a \\'Trend\\' exception for relative numbers.

B. You can specify that the exception is shown for the evaluated structure element, a different structure element, or all structure elements of the query.

C. You can specify that the exception affects characteristic cells, but only for reusable structures.

D. You can limit the data that is evaluated for the exception using the characteristic restriction settings.

Correct Answer: ABD

QUESTION 4

Regarding currency translation, which of the following statements are true? (Choose two)

A. Translating currency at query execution time helps improve query response time for the user.

B. Translating currency during query execution provides for maximum flexibility in the choice of target currency.

C. Translating currency at data load time is best since the user will never want to use different currency exchange rates.

D. Translating currency as data is loaded using transformations can improve query performance by avoiding currency translation at query execution time.

Correct Answer: BD

QUESTION 5

Regarding web analysis, which of the following statements are true? (Choose three)

A. You can navigate to a web-based output from a BEx Analyzer view of the query result.

B. From a web-based presentation of the query results, you can generate a Microsoft Excel workbook output.

C. One or more queries can feed a single Microsoft Excel workbook or a single Web Application.

D. From the BEx Query Designer, you can change the contents of an Excel workbook.

Correct Answer: ABC
