QUESTION 1

What is the function of the negative quants in the goods issue area? (Choose three)

- A. It maps the temporary situation after the goods issue posting and before stock removal
- B. It ensures that the total stocks are the same in both Inventory Management and Warehouse Management
- C. It show that something is missing in the warehouse
- D. It show that the material is to be removed from storage

Correct Answer: ABD

QUESTION 2

We are using large/small quantities stock removal strategies. Which of the following statements are correct? (Choose three)

- A. It always requires a combination of two storage types
- B. The first is the storage type for small quantities from which material are only removed up to a certain quantity, the control quantity.
- C. The second storage type is large quantity storage type and is used to remove quantities above the control quantities
- D. The large/small quantities strategy is particularly suited to dynamic bin storage

Correct Answer: ABC

QUESTION 3

Your organization does not want to use "addition to existing stock" for storage bin. Which of the following is the best reason for this?

- A. It allows addition to existing stock
- B. It will allow the material of same type if the quant criteria are same
- C. It cause the storage bin to be loaded with more materials
- D. The goods receipt date of the quant being added is lost when the quants are merged. This means that the quant will refer to the goods receipt date of the first putaway

Correct Answer: D

QUESTION 4

What are the features of shelf life expiration date strategy for removal of stocks? (Choose three)

- A. It is a variation of the LIFO strategy
- B. The criterion for stock removal is expiration date of the quant, not the goods receipt date
- C. We activate this by company code in Customizing and setup the check for each separate movement type
- D. When we post a goods movement, the system prompts us to enter the date of manufacture and calculates the shelf life expiration date of the material on the basis of the total shelf life.
- E. We activate the shelf life expiration date update at quant level for a warehouse number.

Correct Answer: BDE

QUESTION 5

What is the typical process flow for withdrawal for cost center? (Choose four)

- A. The goods issue in Inventory Management is the start of the process
- B. The goods issue in Warehouse Management is the start of the process
- C. A transfer requirement is generated for the material quantity to be withdrawn
- D. A transfer order is generated for the material quantity to be withdrawn
- E. The material is mapped as a negative quant in the interim storage area goods issue zone
- F. The material is mapped as a negative quant in the interim storage type stock
- G. The material is removed from storage using a transfer order, and subsequently confirmed

Correct Answer: ACEG
