QUESTION 1

Which of the following statements about the @Autowired annotation is NOT true? (select one)

- A. The default behavior is that if a dependency cannot be satisfied with @Autowired, the ApplicationContext will throw a RuntimeException
- B. @Autowired is a Spring-specific annotation
- C. Multiple arguments can be injected into a single method using @Autowired
- D. It cannot be used to annotate fields, only constructors and methods

Correct Answer: D

QUESTION 2

Which of the following statements is true with respect to Spring's support for Object-Relational Mapping (ORM) libraries (select one)

- A. Spring supports management of Hibernate Sessions or JPA PersistenceContexts in combination with local transactions
- B. Spring provides support for translating exceptions thrown from ORM libraries into Spring's own exception hierarchy
- C. Spring provides FactoryBeans to configure each of the supported ORM libraries
- D. All of the above is true

Correct Answer: D

QUESTION 3

Which of the following data access technologies does Spring support? (Select one)

- A. JDBC
- B. JPA
- C. JBoss Hibernate
- D. All of the above

Correct Answer: D

QUESTION 4

Which of the following is NOT true about @Controller-annotated classes? (Select one)

- A. They are eligible for handling requests in Spring MVC.
- B. They must implement a special interface.
- C. They can be discovered via component scanning.
- D. They can be configured as Spring beans via XML configuration.

Correct Answer: B

QUESTION 5

Which of the following is NOT true about the @RequestMapping annotation? (select one)

- A. It is an annotation for mapping web requests to controller methods.
- B. It is commonly used for component scanning purpose.
- C. You can use it only with @Controller annotated classes.

Correct Answer: B
