QUESTION 1

A load balancing/firewall application is prepackaged to run on a specific hypervisor. An administrator downloads it from a vendor site, imports it into the VDC environment, then performs minimal configuration tasks. Once installed, this application will solve a specific business problem for the organization.

What is this an example of?

A. A virtual appliance

B. A web application

C. A legacy application

D. A thin appliance

Correct Answer: A

QUESTION 2

A large enterprise has introduced virtualization into a data center. During live Mitigation, several virtual hosts have recognized lost cluster heartbeats and network performance degradation.

Which solution should be implemented to immediate the solution?

A. Implement load balance on the HBA to improve overall host performance

B. Implement isolated VLAs to separate management control traffic from production traffic

C. Implement load balancing on the NICs to improve overall host performance

D. Implement a distributed virtual switch to separate the data plane from the control plane on the NIC

Correct Answer: D

QUESTION 3

Which is an example of vertically scaling a virtual application?

A. Cluster two database virtual servers on a single physical server

B. Migrate a database virtual server to a higher-capacity physical server

C. Migrate a database virtual server to a less-utilized physical server

D. Cluster two database virtual servers across two physical servers

Correct Answer: B

QUESTION 4

Why is it important to identify business objectives prior to planning and designing a virtual infrastructure?

A. IT objectives are the same as business objectives

B. IT objectives drive business objectives

C. IT objectives are linked to business objectives

D. Business objectives are a higher priority than IT objectives

Correct Answer: C

QUESTION 5

What can the consumer manage and control when subscribing to cloud Software as a Service (SaaS)?

A. OS settings

B. Network settings

C. Application settings

D. API module

Correct Answer: C
