

E20-026^{Q&As}

Enterprise Storage Networking Specialist Exam

Pass EMC E20-026 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.geekcert.com/e20-026.html>

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by EMC
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Your colleague, who is new to Hadoop, approaches you with a question. They want to know how best to access their data. This colleague has a strong background in data flow languages and programming. Which query interface would you recommend?

- A. Pig
- B. Hive
- C. Howl
- D. HBase

Correct Answer: A

QUESTION 2

What is the purpose of the process step "parsing" in text analysis?

- A. imposes a structure on the unstructured/semi-structured text for downstream analysis
- B. performs the search and/or retrieval in finding a specific topic or an entity in a document
- C. executes the clustering and classification to organize the contents
- D. computes the TF-IDF values for all keywords and indices

Correct Answer: A

QUESTION 3

When would you use a Wilcoxon Rank Sum test?

- A. When you cannot make an assumption about the distribution of the populations
- B. When the data can easily be sorted
- C. When the populations represent the sums of other values
- D. When the data cannot easily be sorted

Correct Answer: A

QUESTION 4

Refer to the exhibit.

You are asked to write a report on how specific variables impact your client's sales using a data set

provided to you by the client. The data includes 15 variables that the client views as directly related to sales, and you are restricted to these variables only.

After a preliminary analysis of the data, the following findings were made:

1.

Multicollinearity is not an issue among the variables

2.

Only three variables--A, B, and C--have significant correlation with sales. You build a linear regression model on the dependent variable of sales with the independent variables of A, B, and C. The results of the regression are seen in the exhibit.

Which interpretation is supported by the analysis?

Independent Variable	Coefficient	P-Value
A	0.45	0.0000
B	3.67	0.0000
C	1.23	0.0000

$$R^2 = 0.10$$

- A. Variables A,B,and C are significantly impacting sales,but are not effectively estimating sales
- B. Variables A,B,and C are significantly impacting sales and are effectively estimating sales
- C. Due to the R2 of 0.10,the model is not valid ?the linear regression should be re-run with all 15 variables forced into the model to increase the R2
- D. Due to the R2 of 0.10,the model is not valid ?a different analytical model should be attempted

Correct Answer: A

QUESTION 5

In which lifecycle stage are initial hypotheses formed?

- A. Discovery
- B. Model planning
- C. Model building
- D. Data preparation

Correct Answer: A
