QUESTION 1

An SRDF/S design analysis was performed with BCSD. The Volume Exception tab in BCSD has identified several volumes.

What is a reason for this issue?

- A. Acceptable volume write limits have been exceeded
- B. Inadequate bandwidth
- C. Acceptable write pending limits have been exceeded
- D. Unknown limits have been exceeded, further investigation is required

Correct Answer: A

QUESTION 2

A Symmetrix VMAX hosts four applications. Each application is assigned a named Dynamic Cache Partition. Two of the partitions are static and two are flexible. The write pending limit for each partition is set to 60%.

What will happen if an application running in a flexible partition reaches the write pending limit set for that partition?

- A. Host write activity to that partition will be throttled
- B. Cache will be borrowed from the other flexible partition
- C. Cache will be borrowed from the default partition
- D. Write pending limit of the partition will be raised to 80%

Correct Answer: A

QUESTION 3

A Symmetrix Customer has an application that runs 24 hours a day, 7 days a week and 365 days a year.

They would like to replicate the application data simultaneously to four branch offices on a nightly basis.

The branch offices have EMC VNX arrays.

Which solution would you recommend?

- A. Use TimeFinder/Clone to replicate the production application. Then use Open Replicator cold push to replicate the clones.
- B. Use Open Replicator cold push to replicate the production devices
- C. Use Open Replicator hot push to replicate the production devices.

D. Use TimeFinder/Snap to replicate the production application. Then use Open Replicator hot push to replicate the VDEVs.

Correct Answer: A

QUESTION 4

Refer to the exhibit.

A company plans to deploy a one-engine Symmetrix VMAX array in their VMware vSphere environment. The ESXi hosts will be connected to the VMAX array over a FC SAN.

What is the recommended best practice when zoning an ESXi host with two HBAs to the VMAX?

- A. HBA 1 to Port E0 on Odd (7) Director HBA 1 to Port E0 on Even (8) Director HBA 2 to Port G0 on Odd (7) Director HBA 2 to Port G0 on Even (8) Director
- B. HBA 1 to Port E0 on Odd (7) Director HBA 1 to Port G0 on Odd (7) Director HBA 2 to Port E0 on Even (8) Director HBA 2 to Port G0 on Even (8) Director
- C. HBA 1 to Port E0 on Odd (7) Director HBA 1 to Port E1 on Odd (7) Director HBA 2 to Port G0 on Even (8) Director HBA 2 to Port G1 on Even (8) Director
- D. HBA 1 to Port E0 on Odd (7) Director HBA 1 to Port F0 on Odd (7) Director HBA 2 to Port G0 on Odd (7) Director HBA 2 to Port H0 on Odd (7) Director

Correct Answer: A

QUESTION 5

In Enginuity 5671 and earlier, how does SDRF/S behave when multiple writes to a device are received?

- A. Second write waits while first write is acknowledged.
- B. Third write waits while second write is acknowledged.
- C. 8 Concurrent writes are supported on a single device.
- D. 4 Concurrent writes are supported on a single device.

Correct Answer: A
