### QUESTION 1

An EMC NetWorker customer is experiencing poor backup performance. Your analysis determines that significant host resources are used to manage low-level network handshaking operations during backup. Based on EMC recommendations, what can be done to alleviate the handshake issue?

- A. Install 3 TCP offload engine card
- B. Install a second network interface card
- C. Upgrade the LAN
- D. Upgrade the network driver

Correct Answer: B

---

### QUESTION 2

Your customer is looking for a new EMC Data Domain backup solution. They require a solution that provides the ability to operate at no more than 75-85% of its rated capacity. In addition, 1.2 TB per hour throughput is required.

What should be considered when selecting a Data Domain system to meet the performance requirements?

- A. Max Throughput and Max Capacity
- B. Max Throughput and Amount of Data
- C. Number of Clients and Amount of Data
- D. Max Capacity and Amount of Data

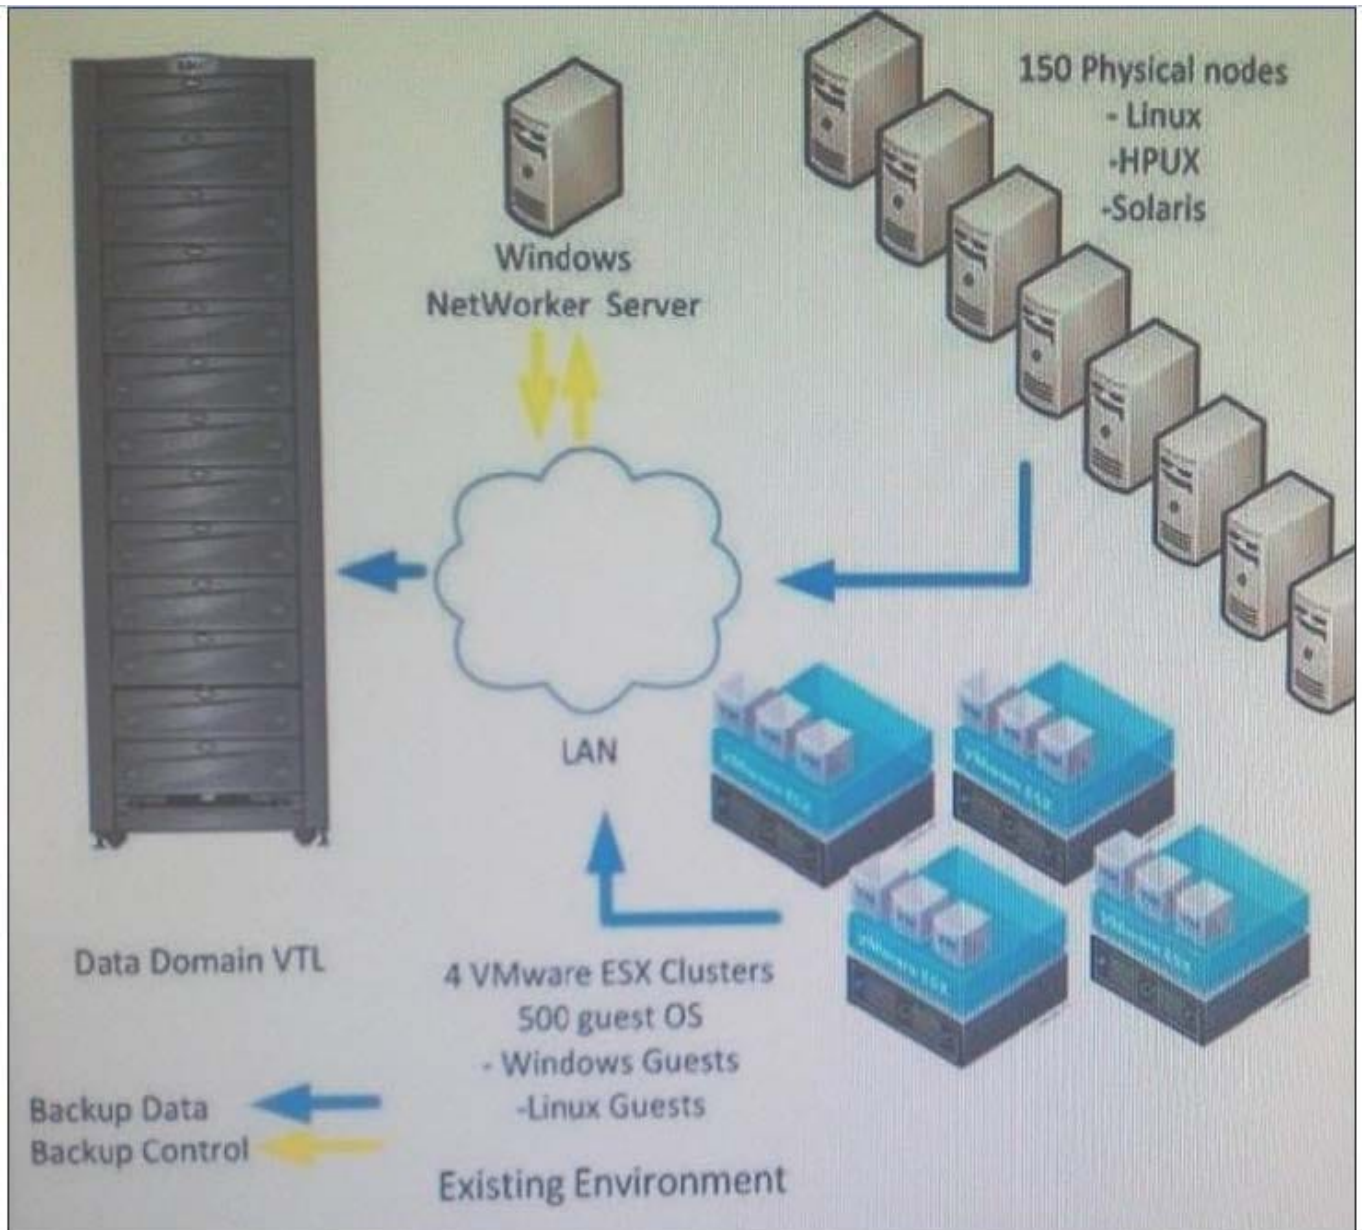

Correct Answer: A

---

### QUESTION 3

A customer is running the backup and recovery configuration shown in the exhibit. They added a new VMware cluster with 100 virtual machines. They are now experiencing slow backups at certain times.

What should the customer have done prior to making changes to the configuration?

- A. Increase EMC NetWorker server memory
- B. Capture baseline performance of the backup environment
- C. Configure alert notification of the backup environment
- D. Add network cards to the EMC NetWorker server

Correct Answer: A

#### QUESTION 4

An EMC NetWorker customer is performing all backups to physical tape. This includes weekly 10 TB backups of static medical imaging data stored on a Dell NAS requiring 8 months retention. Their current tape libraries are approaching end of support life.

The customer has asked EMC for a recommendation that will improve operational backup and restore reliability for their image data with a minimum amount of change. What will meet the customer's requirements?

- A. EMC Disk Library
- B. Deduplication Node
- C. Avamar
- D. Data Domain

Correct Answer: D

---

#### QUESTION 5

A customer has purchased Data Protection Advisor (DPA) to provide a single enterprise report on backup compliance across their 24 geographically dispersed locations. How many DPA servers should be installed?

- A. Twenty- four one at each location
- B. One in the primary data center
- C. Five deployed regionally to balance the load
- D. Two in the primary data center for redundancy

Correct Answer: B
