QUESTION 1

A customer is performing backups of their desktop/laptop clients to an Avamar server. They plan to add a secure Oracle database server as a new backup client. They are concerned about the security of the database data since no data is being encrypted when it is stored on the Avamar.

What is a consideration of enabling encryption at rest?

- A. The amount of storage capacity will be reduced.
- B. Only new clients will have encrypted data.
- C. The desktop/laptop backups will become inaccessible.
- D. Data encryption is not available for Oracle data.

Correct Answer: A

QUESTION 2

A customer has a multi-node EMC Avamar server with eight active storage nodes. They are currently at 85% GSAN capacity and receiving capacity warning messages. The customer would like to purchase four additional nodes for the system.

What is a best practice for adding capacity?

- A. Add two nodes at a time to the existing server
- B. Add one node at a time to the existing server
- C. Migrate capacity to a different server if available
- D. Acquire a new server with sufficient capacity

Correct Answer: A

QUESTION 3

You are adding an Avamar deduplication node to a customer's EMC NetWorker environment. Clients currently back up to tape and perform full backups on Sunday and incrementals on all other days.

In the new solution, these clients will back up to the deduplication node. The speed of recovery is important to the customer. Which changes may be required to the backup schedule?

- A. Perform Full on Sunday and Level 1 backups on all other days of each week
- B. No changes are required to the backup schedule
- C. Perform initial Full backup and Level 1 backups forever
- D. Perform Full backups every day

Correct Answer: D

QUESTION 4

A customer's backup environment consists of an EMC Avamar 6.1 integrated Data Domain solution. A large portion of the backup data comes from Microsoft Exchange servers. The Avamar backups use the Data Domain device as a backup target.

Where are the Microsoft Exchange logs file sent?

- A. Avamar server
- B. Data Domain
- C. Avamar and Data Domain at the same time
- D. Avamar and then moved to Data Domain

Correct Answer: A

QUESTION 5

A customer is deploying an Oracle database and wants to perform online backups of the Oracle database with EMC NetWorker. Due to the nature of their database application, no Oracle datafiles are striped across disk storage.

What is a design consideration when configuring RMAN backup?

- A. RMAN multiplexing should be increased from the default value.
- B. RMAN multiplexing should be decreased from the default value.
- C. Value of FILESPERSET should be set larger than the value of MAXOPENFILES.
- D. Value of MAXOPENFILES should match the number of target devices.

Correct Answer: A
