### QUESTION 1

A customer has just finished configuring an Emulex HBA on a Linux server and has made several driver changes to the modprobe.conf file. Which command should be run to ensure proper loading of the new drivers?

- A. mkinitrd
- B. modprobe
- C. module\_upgrade
- D. modinfo lpfc

Correct Answer: A

---

### QUESTION 2

While performing an NDU what must be done to bypass a rule check?

- A. Enable Engineering mode.
- B. Log in as a Global user.
- C. Log in as a Local User.
- D. Verify FLARE code is committed.

Correct Answer: A

---

### QUESTION 3

A customer is sharing resources across ESX servers in a multi-server environment.

How many hosts can simultaneously access the VMFS?

- A. 32
- B. 64
- C. 16
- D. 128

Correct Answer: A

---

### QUESTION 4

On a Windows server with PowerPath installed, how is I/O routed to the non-owning SP of a LUN?

- A. I/O is balanced across active optimal paths for a given LUN.
- B. I/O is balanced across active paths using the First In, First Out algorithm.
- C. I/O is sent across all paths using the round-robin algorithm.
- D. I/O load balances across non-optimal paths for a given LUN.

Correct Answer: A

---

#### QUESTION 5

A customer's Windows 2008 server has four NICs connected to the private subnet used for iSCSI traffic. Server IP parameters are left at the default settings. How will iSCSI I/O traffic be distributed across the NICs?

- A. One NIC will carry iSCSI traffic and the rest will be in standby.
- B. The four NICs will carry iSCSI traffic in a round-robin pattern.
- C. The four NICs will be divided into two active/passive pairs.
- D. iSCSI traffic will be balanced across all four NICs.

Correct Answer: A
