QUESTION 1

EMC Customer Service has determined a customer's DS4100B needs to be replaced. After bringing the replacement switch (another DS4100B) online, the storage administrator recognizes the Microsoft Exchange MSCS cluster cannot access the CX 3-80 storage over one (1) of its two (2) 4 Gb/s HBA paths. What is the likely problem?

- A. Customer Service engineer configured the wrong IP address for the replacement DS4100B, hence creating an IP conflict with the other fabric's good DS4100B
- B. Customer Service engineer didn't move the old GBICs to the new switch, hence the switch port GBIC now has a different WWN.
- C. The customer has standardized on hard zoning, and the Customer Service engineer plugged one of the CX 3-80 storage ports into the wrong DS4100B switch port.
- D. The customer has standardized on soft zoning, and the Customer Service engineer plugged one of the CX 3-80 storage ports into the wrong DS4100B switch port.

Correct Answer: C

QUESTION 2

How many active zone sets may exist on an MDS-Series switch?

- A. One zone set is permitted for each VSAN, except the isolated VSAN
- B. Only one zone set is permitted for the entire switch
- C. Only three zone sets are permitted: one for the default VSAN, one for the isolated VSAN, and one for the primary VSAN
- D. Only two zone sets are permitted: one for the default VSAN and one for the primary VSAN

Correct Answer: A

QUESTION 3
