QUESTION 1

You have just captured a network trace for a customer reporting slow performance on a Data Mover. When you open the trace you see a very large number of TCP retransmissions.

What is the most likely cause for these retransmissions?

- A. Duplicate IP addresses
- B. Invalid broadcast address
- C. Speed and duplex mismatch
- D. TCP window size too large

Correct Answer: C

QUESTION 2

Which iSCSI objects require secret passwords for two-way CHAP authentication?

- A. Agent and protocol server
- B. Client and target
- C. Target and initiator
- D. Target and source

Correct Answer: A

QUESTION 3

A customer implemented a new Celerra NSX into their existing SAN environment. What is the interconnect between the NSX and the fibre switch?

- A. Fibre connections using MIA. adapters
- B. Fibre connections using SFP adapters
- C. Serial connections using MIA, adapters
- D. Serial connections using SFP adapters

Correct Answer: B

QUESTION 4

What is Intelligent Platform Management Interface (IPMI)?

- A. It connects Data Movers together through the use of a crossover cable
- B. It connects Data Movers together through the use of a serial spider cable
- C. It connects dual Control Stations together through the use of an Ethernet crossover cable
- D. It connects the Control Station to the Storage Processor CMI through a serial cable

Correct Answer: C

QUESTION 5

An NS Control Station is unable to access the back-end when the administrator runs the nas_disk command. What could be the potential problem?

- A. The direct fibre connection between the Control Station and the storage back-end has failed
- B. The heartbeat service between the Control Station and Data Mover has failed
- C. The NBS between the Control Station and the Data Mover has failed
- D. The SMB. daemon on the Control Station has failed

Correct Answer: C
