QUESTION 1

What must be done to use the IP configuration of the active CUA on the standby CUA in the event of a failure/failover?

- A. Nothing. The standby is aware of the active CUA's IP configuration and will use this information once a failover is initiated.
- B. Nothing. The standby is aware of the active CUA's IP configuration and will use this information as soon as the active goes offline, prior to failover initiation.
- C. Once the active CUA is no longer online and failover has been initiated the standby must be reconfigured using the IP configuration of the active.
- D. Once the active CUA is no longer online and failover has not been initiated the standby must be reconfigured using the IP configuration of the active.

Correct Answer: C

QUESTION 2

You are running tests in EMC Centera Verify. You have successfully tested against a PEA file for read, write, and delete. You now want to test the replication function against the address shown in the replica address. However, after three minutes it does not appear that the test is working.

Which action do you need to take?

- A. Check the PEA file to verify that both EMC Centeras are listed in the cluster ID section.
- B. Close and reopen EMC Centera Verify and retry the replication test again.
- C. Nothing, it may take up to 15 minutes for the replication test to complete.
- D. Use a different PEA file for replication tests.

Correct Answer: C

QUESTION 3

Shortly after starting replication on a new site, the customer encounters a major network issue and informs you that the network to Site 2 will be down for up to 4 days.

What recommendation would you make to the customer about their replication?

- A. Leave replication paused until the network returns, then do a restore.
- B. Leave replication paused until the network returns, then do a resume.
- C. Stop replication until the network is back in operation, then do a migration.
- D. Stop replication until the network is back in operation, then do a restore.

Correct Answer: B

QUESTION 4

You have installed the c2c utility and connected to the node running the command center. How is the smtp server configured?

- A. setconfig email_host
- B. setconfig mail_host
- C. setconfig smtp_host
- D. updateconfig smtp_host

Correct Answer: C

QUESTION 5

Which C2C component is installed on an access node, collects statistical information, and interacts with all the C2C clients?

- A. Command Center component
- B. Data Migration component
- C. Diff component
- D. Mining component

Correct Answer: A
